Target/Specificity

This MGAT2 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 409-439 amino acids from the C-terminal region of human MGAT2.

Dilution

WB~~1:1000
FC~~1:10~50

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

MGAT2 Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

MGAT2 Antibody (C-term) - Protein Information

Name MGAT2

Function Plays an essential role in protein N-glycosylation. Catalyzes the transfer of N-acetylglucosamine (GlcNAc) onto the free terminal mannose moiety in the core structure of the nascent N-linked glycan chain, giving rise to the second branch in complex glycans.

Cellular Location

Golgi apparatus membrane; Single-pass type II membrane protein

MGAT2 Antibody (C-term) - Background

MGAT2 (UDP-N-acetylglucosamine:alpha-6-D-mannoside-beta-1, 2-N-acetylglucosaminyltransferase II) is a Golgi enzyme catalyzing an essential step in the conversion of oligomannose to complex N-glycans. The enzyme has the typical glycosyltransferase domains: a short N-terminal cytoplasmic domain, a hydrophobic non-cleavable signal-anchor domain, and a C-terminal catalytic domain. Mutations in MGAT2 may lead to carbohydrate-deficient glycoprotein syndrome, type II.
