

Phospho-LIMK1(Thr508)) Antibody
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP3745a

Specification

Phospho-LIMK1(Thr508)) Antibody - Product Information

Application	DB,E
Primary Accession	P53667
Other Accession	NP_002305.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	72585

Phospho-LIMK1(Thr508)) Antibody - Additional Information

Gene ID 3984

Other Names

LIM domain kinase 1, LIMK-1, LIMK1, LIMK

Target/Specificity

This LIMK1 Antibody is generated from rabbits immunized with a KLH conjugated synthetic phosphopeptide corresponding to amino acid residues surrounding Thr508 of human LIMK1.

Dilution

DB~~1:500

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Phospho-LIMK1(Thr508)) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Phospho-LIMK1(Thr508)) Antibody - Protein Information

Name LIMK1

Synonyms LIMK

Function Serine/threonine-protein kinase that plays an essential role in the regulation of actin

filament dynamics. Acts downstream of several Rho family GTPase signal transduction pathways (PubMed:[10436159](#), PubMed:[11832213](#), PubMed:[12807904](#), PubMed:[15660133](#), PubMed:[16230460](#), PubMed:[18028908](#), PubMed:[22328514](#), PubMed:[23633677](#)). Activated by upstream kinases including ROCK1, PAK1 and PAK4, which phosphorylate LIMK1 on a threonine residue located in its activation loop (PubMed:[10436159](#)). LIMK1 subsequently phosphorylates and inactivates the actin binding/depolymerizing factors cofilin-1/CFL1, cofilin-2/CFL2 and destrin/DSTN, thereby preventing the cleavage of filamentous actin (F-actin), and stabilizing the actin cytoskeleton (PubMed:[11832213](#), PubMed:[15660133](#), PubMed:[16230460](#), PubMed:[23633677](#)). In this way LIMK1 regulates several actin-dependent biological processes including cell motility, cell cycle progression, and differentiation (PubMed:[11832213](#), PubMed:[15660133](#), PubMed:[16230460](#), PubMed:[23633677](#)). Phosphorylates TPPP on serine residues, thereby promoting microtubule disassembly (PubMed:[18028908](#)). Stimulates axonal outgrowth and may be involved in brain development (PubMed:[18028908](#)).

Cellular Location

Cytoplasm. Nucleus. Cytoplasm, cytoskeleton. Cell projection, lamellipodium {ECO:0000250|UniProtKB:P53668} Note=Predominantly found in the cytoplasm. Localizes in the lamellipodium in a CDC42BPA, CDC42BPB and FAM89B/LRAP25-dependent manner. {ECO:0000250|UniProtKB:P53668}

Tissue Location

Highest expression in both adult and fetal nervous system. Detected ubiquitously throughout the different regions of adult brain, with highest levels in the cerebral cortex. Expressed to a lesser extent in heart and skeletal muscle

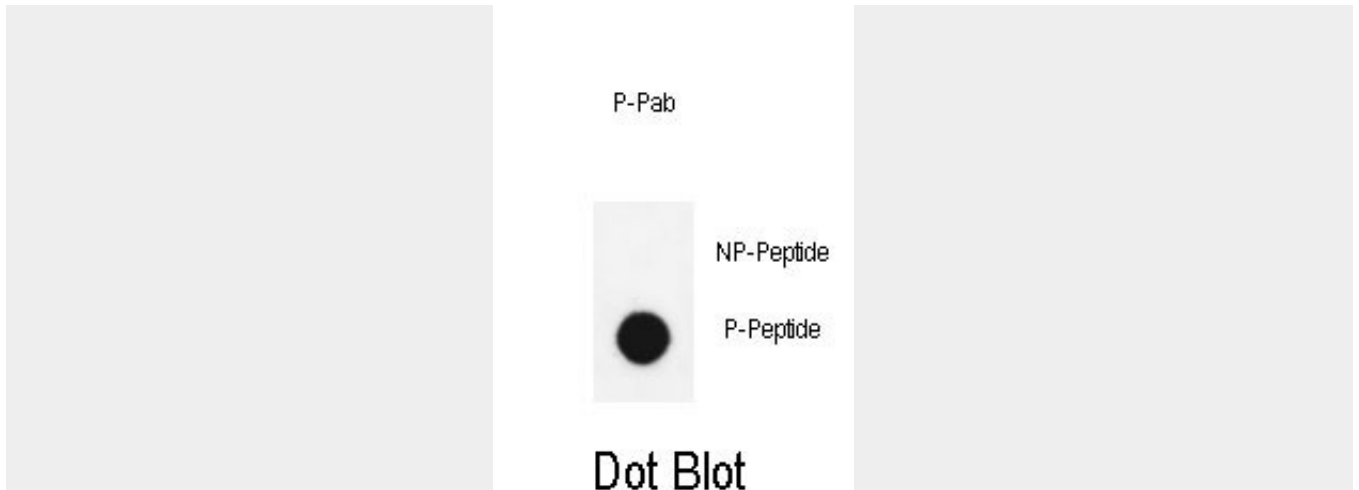

Phospho-LIMK1(Thr508) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Phospho-LIMK1(Thr508) Antibody - Images

Dot blot analysis of anti-Phospho-LIMK1 (Thr508) antibody Phospho-specific Pab (Cat. #AP3745a) on nitrocellulose membrane. 50ng of Phospho-peptide or Non Phospho-peptide per dot were adsorbed. Antibody working concentrations are 0.6ug per ml.

Phospho-LIMK1(Thr508)) Antibody - Background

There are approximately 40 known eukaryotic LIM proteins, so named for the LIM domains they contain. LIM domains are highly conserved cysteine-rich structures containing 2 zinc fingers. Although zinc fingers usually function by binding to DNA or RNA, the LIM motif probably mediates protein-protein interactions. LIM kinase-1 and LIM kinase-2 belong to a small subfamily with a unique combination of 2 N-terminal LIM motifs and a C-terminal protein kinase domain. LIMK1 is likely to be a component of an intracellular signaling pathway and may be involved in brain development. LIMK1 hemizyosity is implicated in the impaired visuospatial constructive cognition of Williams syndrome. [provided by RefSeq].
