

Anti-SNAI1/2 Antibody

Catalog # AP53703

### Specification

# Anti-SNAI1/2 Antibody - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Calculated MW WB, IF <u>095863</u> <u>043623</u> Human, Mouse Rabbit Polyclonal 29083

## Anti-SNAI1/2 Antibody - Additional Information

Gene ID 6615

**Other Names** SNAH; Zinc finger protein SNAI1; Protein snail homolog 1; Protein sna

**Target/Specificity** Recognizes endogenous levels of SNAI1 protein.

**Dilution** WB~~1/500 - 1/1000 IF~~1/50 - 1/200

**Format** Liquid in 0.42% Potassium phosphate, 0.87% Sodium chloride, pH 7.3, 30% glycerol, and 0.09% (W/V) sodium azide.

Storage Store at -20 °C.Stable for 12 months from date of receipt

## Anti-SNAI1/2 Antibody - Protein Information

Name SNAI1

Synonyms SNAH

Function

Involved in induction of the epithelial to mesenchymal transition (EMT), formation and maintenance of embryonic mesoderm, growth arrest, survival and cell migration (PubMed:<a href="http://www.uniprot.org/citations/10655587" target="\_blank">10655587</a>, PubMed:<a href="http://www.uniprot.org/citations/15647282" target="\_blank">15647282</a>, PubMed:<a href="http://www.uniprot.org/citations/20389281" target="\_blank">20389281</a>, PubMed:<a href="http://www.uniprot.org/citations/20389281" target="\_blank">20389281</a>, PubMed:<a href="http://www.uniprot.org/citations/20562920" target="\_blank">20562920</a>, PubMed:<a href="http://www.uniprot.org/citations/21952048" target="\_blank">21952048</a>, PubMed:<a

href="http://www.uniprot.org/citations/25827072" target="\_blank">25827072</a>). Binds to 3 E-boxes of the E-cadherin/CDH1 gene promoter and to the promoters of CLDN7 and KRT8 and, in association with histone demethylase KDM1A which it recruits to the promoters, causes a decrease in dimethylated H3K4 levels and represses transcription (PubMed:<a

href="http://www.uniprot.org/citations/10655587" target="\_blank">10655587</a>, PubMed:<a href="http://www.uniprot.org/citations/20389281" target="\_blank">20389281</a>, PubMed:<a href="http://www.uniprot.org/citations/20562920" target="\_blank">20562920</a>). The N-terminal SNAG domain competes with histone H3 for the same binding site on the histone demethylase complex formed by KDM1A and RCOR1, and thereby inhibits demethylation of histone H3 at 'Lys-4' (in vitro) (PubMed:<a href="http://www.uniprot.org/citations/20389281" target="\_blank">20389281</a>, PubMed:<a href="http://www.uniprot.org/citations/20389281" target="\_blank">20389281" target="\_blank">20389281</a>, PubMed:<a href="http://www.uniprot.org/citations/20389281" target="\_blank">20389281</a>, PubMed:<a href="http://www.uniprot.org/citations/21300290" target="\_blank">21300290</a>, PubMed:<a href="http://www.uniprot.org/citations/23721412" target="\_blank">23721412</a>). During EMT, involved with LOXL2 in negatively regulating pericentromeric heterochromatin transcription (PubMed:<a

href="http://www.uniprot.org/citations/16096638" target="\_blank">16096638</a>). SNAI1 recruits LOXL2 to pericentromeric regions to oxidize histone H3 and repress transcription which leads to release of heterochromatin component CBX5/HP1A, enabling chromatin reorganization and acquisition of mesenchymal traits (By similarity). Associates with EGR1 and SP1 to mediate tetradecanoyl phorbol acetate (TPA)-induced up-regulation of CDKN2B, possibly by binding to the CDKN2B promoter region 5'-TCACA-3 (PubMed:<a

href="http://www.uniprot.org/citations/20121949" target="\_blank">20121949</a>). In addition, may also activate the CDKN2B promoter by itself (PubMed:<a

href="http://www.uniprot.org/citations/20121949" target="\_blank">20121949</a>).

### **Cellular Location**

Nucleus. Cytoplasm. Note=Once phosphorylated (probably on Ser-107, Ser-111, Ser-115 and Ser-119) it is exported from the nucleus to the cytoplasm where subsequent phosphorylation of the destruction motif and ubiquitination involving BTRC occurs.

#### **Tissue Location**

Expressed in a variety of tissues with the highest expression in kidney. Expressed in mesenchymal and epithelial cell lines.

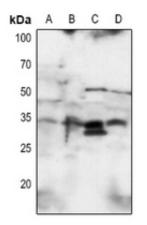

### Anti-SNAI1/2 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

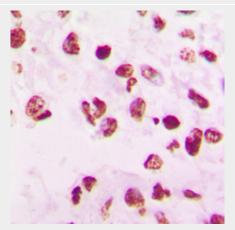

- <u>Western Blot</u>
- **Blocking Peptides**
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Anti-SNAI1/2 Antibody - Images

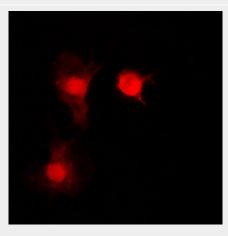

Western blot analysis of SNAI1/2 expression in HCT116 (A), MCF7 (B), mouse lung (C), mouse liver (D) whole cell lysates.

Immunohistochemical analysis of SNAI1 staining in human lung cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of SNAI1 staining in HEK293T cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with a DyLight 594-conjugated secondary antibody (red) in PBS at room temperature in the dark.

## Anti-SNAI1/2 Antibody - Background

Rabbit polyclonal antibody to SNAI1
