TAF9 Polyclonal Antibody - Protein Information**Name** TAF9**Synonyms** TAF2G, TAFII31**Function**

The TFIID basal transcription factor complex plays a major role in the initiation of RNA polymerase II (Pol II)-dependent transcription (PubMed: [33795473](http://www.uniprot.org/citations/33795473)). TFIID recognizes and binds promoters with or without a TATA box via its subunit TBP, a TATA-box-binding protein, and promotes assembly of the pre-initiation complex (PIC) (PubMed: [33795473](http://www.uniprot.org/citations/33795473)). The TFIID complex consists of TBP and TBP-associated factors (TAFs), including TAF1, TAF2, TAF3, TAF4, TAF5, TAF6, TAF7, TAF8, TAF9, TAF10, TAF11, TAF12 and TAF13 (PubMed: [33795473](http://www.uniprot.org/citations/33795473)). TAF9 is also a component of the TBP-free TAFII complex (TFTC), the PCAF histone acetylase complex and the STAGA transcription coactivator-HAT complex (PubMed: [15899866](http://www.uniprot.org/citations/15899866)). TAF9 and its paralog TAF9B are involved in transcriptional activation as well as repression of

distinct but overlapping sets of genes (PubMed: [15899866](http://www.uniprot.org/citations/15899866)). Essential for cell viability (PubMed: [15899866](http://www.uniprot.org/citations/15899866)). May have a role in gene regulation associated with apoptosis (PubMed: [15899866](http://www.uniprot.org/citations/15899866)).
