**MED12L Polyclonal Antibody - Protein Information**

**Name** MED12L

**Synonyms** KIAA1635, TNRC11L, TRALP, TRALPUSH

**Function**

May be a component of the Mediator complex, a coactivator involved in the regulated transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge to convey information from gene-specific regulatory proteins to the basal RNA polymerase II transcription machinery. Mediator is recruited to promoters by direct interactions with regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation complex with RNA polymerase II and the general transcription factors (By similarity).

**Cellular Location**

Nucleus.
