ACPT Polyclonal Antibody - Protein Information

Name ACP4 ([HGNC:14376](#))

Function

May dephosphorylate receptor tyrosine-protein kinase ERBB4 and inhibits its ligand-induced proteolytic cleavage (PubMed:[15219672](http://www.uniprot.org/citations/15219672)). May play a role in odontogenesis (PubMed:[27843125](http://www.uniprot.org/citations/27843125)).

Cellular Location

Membrane; Single-pass type I membrane protein

Tissue Location

Expressed mainly in the testis. Also expressed in the brain where they are enriched at the postsynaptic sites. Expressed at lower levels in the trachea, prostate, bone marrow, spinal cord, colon, fetal brain, heart, thymus, fetal liver, spleen, leukocytes, ovary, small intestine, pancreas and skeletal muscle. Expression is significantly lower in testicular cancer tissues than in normal testicular tissues. Isoform 3 is expressed in the testis, trachea, prostate and bone marrow.
