

G protein beta subunit like Polyclonal Antibody Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP58901

## **Specification**

## G protein beta subunit like Polyclonal Antibody - Product Information

Application Primary Accession Reactivity Host Clonality Calculated MW IHC-P <u>O9BVC4</u> Rat, Pig, Dog, Bovine Rabbit Polyclonal 35876

### G protein beta subunit like Polyclonal Antibody - Additional Information

Gene ID 64223

#### **Other Names**

Target of rapamycin complex subunit LST8, TORC subunit LST8, G protein beta subunit-like, Gable, Protein GbetaL, Mammalian lethal with SEC13 protein 8, mLST8, MLST8, GBL, LST8

Format

0.01M TBS(pH7.4), 0.09% (W/V) sodium azide and 50% Glyce

Storage

Store at -20 °C for one year. Avoid repeated freeze/thaw cycles. When reconstituted in sterile pH 7.4 0.01M PBS or diluent of antibody the antibody is stable for at least two weeks at 2-4 °C.

# G protein beta subunit like Polyclonal Antibody - Protein Information

### Name MLST8 {ECO:0000303|PubMed:34741373, ECO:0000312|HGNC:HGNC:24825}

#### Function

Subunit of both mTORC1 and mTORC2, which regulates cell growth and survival in response to nutrient and hormonal signals (PubMed:<a href="http://www.uniprot.org/citations/12718876" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/15268862" target="\_blank">15268862</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">15268862</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">15467718</a>, PubMed:<a href="http://www.uniprot.org/citations/24403073" target="\_blank">24403073</a>, PubMed:<a href="http://www.uniprot.org/citations/28489822" target="\_blank">28489822</a>). mTORC1 is activated in response to growth factors or amino acids (PubMed:<a href="http://www.uniprot.org/citations/15268862" target="\_blank">15268862</a>, PubMed:<a href="http://www.uniprot.org/citations/28489822" target="\_blank">15268862</a>, PubMed:<a href="http://www.uniprot.org/citations/12718876" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/15268862" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">12718876</a>, PubMed:<a href="http://www.uniprot.org/citations/24403073" target="\_blank">1268862</a>, PubMed:<a href="http://www.uniprot.org/citations/24403073" target="\_blank">124

(PubMed:<a href="http://www.uniprot.org/citations/12718876" target="\_blank">12718876</a>,

PubMed:<a href="http://www.uniprot.org/citations/15268862" target="\_blank">15268862</a>, PubMed:<a href="http://www.uniprot.org/citations/15467718" target="\_blank">15467718</a>, PubMed:<a href="http://www.uniprot.org/citations/24403073" target="\_blank">24403073</a>, In the same time, it inhibits catabolic pathways by phosphorylating the autophagy initiation components ULK1 and ATG13, as well as transcription factor TFEB, a master regulators of lysosomal biogenesis and autophagy (PubMed:<a

href="http://www.uniprot.org/citations/24403073" target=" blank">24403073</a>). The mTORC1 complex is inhibited in response to starvation and amino acid depletion (PubMed:<a href="http://www.uniprot.org/citations/24403073" target=" blank">24403073</a>). Within mTORC1, MLST8 interacts directly with MTOR and enhances its kinase activity (PubMed: <a href="http://www.uniprot.org/citations/12718876" target=" blank">12718876</a>). In nutrient-poor conditions, stabilizes the MTOR- RPTOR interaction and favors RPTOR-mediated inhibition of MTOR activity (PubMed:<a href="http://www.uniprot.org/citations/12718876" target=" blank">12718876</a>). As part of the mTORC2 complex, transduces signals from growth factors to pathways involved in proliferation, cytoskeletal organization, lipogenesis and anabolic output (PubMed: <a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>, PubMed:<a href="http://www.uniprot.org/citations/35926713" target=" blank">35926713</a>). mTORC2 is also activated by growth factors, but seems to be nutrient-insensitive (PubMed:<a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>, PubMed:<a href="http://www.uniprot.org/citations/35926713" target=" blank">35926713</a>). In response to growth factors, mTORC2 phosphorylates and activates AGC protein kinase family members, including AKT (AKT1, AKT2 and AKT3), PKC (PRKCA, PRKCB and PRKCE) and SGK1 (PubMed: <a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>, PubMed:<a href="http://www.uniprot.org/citations/35926713" target=" blank">35926713</a>). mTORC2 functions upstream of Rho GTPases to regulate the actin cytoskeleton, probably by activating one or more Rho-type guanine nucleotide exchange factors (PubMed: <a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>). mTORC2 promotes the serum-induced formation of stress-fibers or F-actin (PubMed:<a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>). mTORC2 plays a critical role in AKT1 activation by mediating phosphorylation of different sites depending on the context, such as 'Thr-450', 'Ser-473', 'Ser-477' or 'Thr-479', facilitating the phosphorylation of the activation loop of AKT1 on 'Thr-308' by PDPK1/PDK1 which is a prerequisite for full activation (PubMed:<a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>). mTORC2 regulates the phosphorylation of SGK1 at 'Ser-422' (PubMed: <a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>). mTORC2 also modulates the phosphorylation of PRKCA on 'Ser-657' (PubMed: <a href="http://www.uniprot.org/citations/15467718" target=" blank">15467718</a>). Within mTORC2, MLST8 acts as a bridge between MAPKAP1/SIN1 and MTOR (PubMed:<a

href="http://www.uniprot.org/citations/31085701" target="\_blank">31085701</a>).

### **Cellular Location**

Lysosome membrane. Cytoplasm {ECO:0000250|UniProtKB:Q9Z2K5}. Note=Targeting to lysosomal membrane depends on amino acid availability: mTORC1 is recruited to lysosome membranes via interaction with GTP-bound form of RagA/RRAGA (or RagB/RRAGB) in complex with the GDP-bound form of RagC/RRAGC (or RagD/RRAGD), promoting its mTORC1 recruitment to the lysosomes

**Tissue Location** Broadly expressed, with highest levels in skeletal muscle, heart and kidney.

# G protein beta subunit like Polyclonal Antibody - Protocols

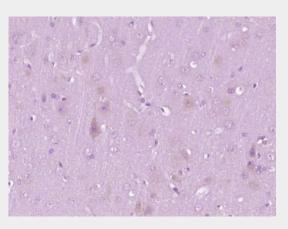

Provided below are standard protocols that you may find useful for product applications.

<u>Western Blot</u>

- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

# G protein beta subunit like Polyclonal Antibody - Images

Paraformaldehyde-fixed, paraffin embedded (rat brain tissue); Antigen retrieval by boiling in sodium citrate buffer (pH6.0) for 15min; Block endogenous peroxidase by 3% hydrogen peroxide for 20 minutes; Blocking buffer (normal goat serum) at 37°C for 30min; Antibody incubation with (GBL protein) Polyclonal Antibody, Unconjugated (bs-8161R) at 1:400 overnight at 4°C, followed by operating according to SP Kit(Rabbit) (sp-0023) instructionsand DAB staining.
