Anti-LZK Antibody - Protein Information

Name MAP3K13 ([HGNC:6852](#))

Function

Activates the JUN N-terminal pathway through activation of the MAP kinase kinase MAP2K7. Acts synergistically with PRDX3 to regulate the activation of NF-kappa-B in the cytosol. This activation is kinase-dependent and involves activating the IKK complex, the IKBKB- containing complex that phosphorylates inhibitors of NF-kappa-B.

Cellular Location

Cytoplasm. Membrane; Peripheral membrane protein

Tissue Location

Expressed in the adult brain, liver, placenta and pancreas, with expression strongest in the pancreas
