Anti-SF1 Antibody - Images

Western blot analysis of SF1 expression in HEK293T (A), HeLa (B), K562 (C), LO2 (D) whole cell lysates.

Immunohistochemical analysis of SF1 staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the

chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of SF1 staining in HeLa cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with Alexa Fluor 647-conjugated secondary antibody (red) in PBS at room temperature in the dark.

Anti-SF1 Antibody - Background

KLH-conjugated synthetic peptide encompassing a sequence within the N-term region of human SF1. The exact sequence is proprietary.
