Jagged 2 (JAG2) Antibody (C-term) - Images

Western blot analysis of Jag2 (arrow) using JAG2 Antibody (C-term) (Cat.#AP6148a). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected with the JAG2 gene (Lane 2) (Origene Technologies).

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.

Jagged 2 (JAG2) Antibody (C-term) - Background

The Notch signaling pathway is an intercellular signaling mechanism that is essential for proper embryonic development. Members of the Notch gene family encode transmembrane receptors that are critical for various cell fate decisions. JAG2 is one of several ligands that activate Notch and related receptors.
