**DUSP6 Polyclonal Antibody - Protein Information****Name** DUSP6**Synonyms** MKP3, PYST1**Function**

Inactivates MAP kinases. Has a specificity for the ERK family (PubMed:<a href="http://www.uniprot.org/citations/9858808" target="\_blank">9858808</a>). Plays an important role in alleviating chronic postoperative pain. Necessary for the normal dephosphorylation of the long-lasting phosphorylated forms of spinal MAPK1/3 and MAP kinase p38 induced by peripheral surgery, which drives the resolution of acute postoperative allodynia (By similarity). Also important for dephosphorylation of MAPK1/3 in local wound tissue, which further contributes to resolution of acute pain (By similarity). Promotes cell differentiation by regulating MAPK1/MAPK3 activity and regulating the expression of AP1 transcription factors (PubMed:<a href="http://www.uniprot.org/citations/29043977" target="\_blank">29043977</a>).

**Cellular Location**

Cytoplasm.

### Tissue Location
