**PPAR Delta mouse Monoclonal Antibody(2F9) - Protein Information****Name** PPARΔ ([HGNC:9235](#))**Synonyms** NR1C2, PPARB**Function**

Ligand-activated transcription factor key mediator of energy metabolism in adipose tissues (PubMed: [35675826](http://www.uniprot.org/citations/35675826)). Receptor that binds peroxisome proliferators such as hypolipidemic drugs and fatty acids. Has a preference for poly-unsaturated fatty acids, such as gamma- linoleic acid and eicosapentanoic acid. Once activated by a ligand, the receptor binds to promoter elements of target genes. Regulates the peroxisomal beta-oxidation pathway of fatty acids. Functions as transcription activator for the acyl-CoA oxidase gene. Decreases expression of NPC1L1 once activated by a ligand.

**Cellular Location**

Nucleus.

### Tissue Location

Ubiquitous with maximal levels in placenta and skeletal muscle
