**Erbin (phospho Tyr1104) Polyclonal Antibody - Protein Information****Name** ERBIN {ECO:0000303|PubMed:10878805}**Function**

Acts as an adapter for the receptor ERBB2, in epithelia. By binding the unphosphorylated 'Tyr-1248' of receptor ERBB2, it may contribute to stabilize this unphosphorylated state (PubMed:<a href="http://www.uniprot.org/citations/16203728" target="\_blank">16203728</a>). Inhibits NOD2-dependent NF-kappa-B signaling and pro-inflammatory cytokine secretion (PubMed:<a href="http://www.uniprot.org/citations/16203728" target="\_blank">16203728</a>).

**Cellular Location**

Cell junction, hemidesmosome. Nucleus membrane. Basolateral cell membrane. Note=Found in hemidesmosomes, which are cell-substrate adhesion complexes in stratified epithelia. In transfected cells, either diffusely distributed over the cytoplasm or concentrated at the basolateral membrane. Colocalizes with the adrenergic receptors, ADREN1A and ADREN1B, at the nuclear membrane of cardiac myocytes (By similarity).

**Tissue Location**

Highly expressed in brain, heart, kidney, muscle and stomach, followed by liver, spleen and

intestine
