

**IL-1 $\alpha$  Polyclonal Antibody**  
Catalog # AP70504**Specification****IL-1 $\alpha$  Polyclonal Antibody - Product Information**

Application	IHC
Primary Accession	<a href="#">P01583</a>
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal

**IL-1 $\alpha$  Polyclonal Antibody - Additional Information**

Gene ID 3552

**Other Names**

IL1A; IL1F1; Interleukin-1 alpha; IL-1 alpha; Hematopoietin-1

**Dilution**

IHC~~Immunohistochemistry: 1/100 - 1/300. ELISA: 1/10000. Not yet tested in other applications.

**Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

**Storage Conditions**

-20°C

**IL-1 $\alpha$  Polyclonal Antibody - Protein Information**

Name IL1A

Synonyms IL1F1

**Function**

Cytokine constitutively present intracellularly in nearly all resting non-hematopoietic cells that plays an important role in inflammation and bridges the innate and adaptive immune systems (PubMed: [26439902](http://www.uniprot.org/citations/26439902)). After binding to its receptor IL1R1 together with its accessory protein IL1RAP, forms the high affinity interleukin-1 receptor complex (PubMed: [17507369](http://www.uniprot.org/citations/17507369), PubMed: [2950091](http://www.uniprot.org/citations/2950091)). Signaling involves the recruitment of adapter molecules such as MYD88, IRAK1 or IRAK4 (PubMed: [17507369](http://www.uniprot.org/citations/17507369)). In turn, mediates the activation of NF-kappa-B and the three MAPK pathways p38, p42/p44 and JNK pathways (PubMed: [14687581](http://www.uniprot.org/citations/14687581)). Within the cell, acts as an alarmin and cell death results in its liberation in the extracellular space after disruption of the cell membrane to induce inflammation and alert the host to injury or damage (PubMed: [14687581](http://www.uniprot.org/citations/14687581)).

href="http://www.uniprot.org/citations/15679580" target="\_blank">15679580</a>). In addition to its role as a danger signal, which occurs when the cytokine is passively released by cell necrosis, directly senses DNA damage and acts as a signal for genotoxic stress without loss of cell integrity (PubMed:<a href="http://www.uniprot.org/citations/26439902" target="\_blank">26439902</a>).

#### Cellular Location

Nucleus. Cytoplasm. Secreted Note=The lack of a specific hydrophobic segment in the precursor sequence suggests that IL-1 is released by damaged cells or is secreted by a mechanism differing from that used for other secretory proteins The secretion is dependent on protein unfolding and facilitated by the cargo receptor TMED10; it results in protein translocation from the cytoplasm into the ERGIC (endoplasmic reticulum-Golgi intermediate compartment) followed by vesicle entry and secretion (PubMed:32272059) Recruited to DNA damage sites and secreted after genotoxic stress

#### IL-1 $\alpha$ Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

#### IL-1 $\alpha$ Polyclonal Antibody - Background

Produced by activated macrophages, IL-1 stimulates thymocyte proliferation by inducing IL-2 release, B-cell maturation and proliferation, and fibroblast growth factor activity. IL-1 proteins are involved in the inflammatory response, being identified as endogenous pyrogens, and are reported to stimulate the release of prostaglandin and collagenase from synovial cells.
