

**GCN2 Antibody (N-term G11)**  
**Purified Rabbit Polyclonal Antibody (Pab)**  
**Catalog # AP7130A**

**Specification**

---

**GCN2 Antibody (N-term G11) - Product Information**

Application	<b>WB, IHC-P,E</b>
Primary Accession	<a href="#">O9P2K8</a>
Reactivity	<b>Human</b>
Host	<b>Rabbit</b>
Clonality	<b>Polyclonal</b>
Isotype	<b>Rabbit IgG</b>
Antigen Region	<b>1-30</b>

**GCN2 Antibody (N-term G11) - Additional Information**

**Gene ID** 440275

**Other Names**

Eukaryotic translation initiation factor 2-alpha kinase 4, GCN2-like protein, EIF2AK4, GCN2, KIAA1338

**Target/Specificity**

This GCN2 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 1-30 amino acids from the N-terminal region of human GCN2.

**Dilution**

WB~~1:1000  
IHC-P~~1:50~100

**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

**Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

GCN2 Antibody (N-term G11) is for research use only and not for use in diagnostic or therapeutic procedures.

**GCN2 Antibody (N-term G11) - Protein Information**

**Name** EIF2AK4 ([HGNC:19687](#))

**Synonyms** GCN2, KIAA1338

**Function** Metabolic-stress sensing protein kinase that phosphorylates the alpha subunit of eukaryotic translation initiation factor 2 (EIF2S1/eIF-2-alpha) in response to low amino acid availability (PubMed:[25329545](#), PubMed:[32610081](#)). Plays a role as an activator of the integrated stress response (ISR) required for adaptation to amino acid starvation (By similarity). EIF2S1/eIF-2-alpha phosphorylation in response to stress converts EIF2S1/eIF-2-alpha into a global protein synthesis inhibitor, leading to a global attenuation of cap-dependent translation, and thus to a reduced overall utilization of amino acids, while concomitantly initiating the preferential translation of ISR- specific mRNAs, such as the transcriptional activator ATF4, and hence allowing ATF4-mediated reprogramming of amino acid biosynthetic gene expression to alleviate nutrient depletion (PubMed:[32610081](#)). Binds uncharged tRNAs (By similarity). Required for the translational induction of protein kinase PRKCH following amino acid starvation (By similarity). Involved in cell cycle arrest by promoting cyclin D1 mRNA translation repression after the unfolded protein response pathway (UPR) activation or cell cycle inhibitor CDKN1A/p21 mRNA translation activation in response to amino acid deprivation (PubMed:[26102367](#)). Plays a role in the consolidation of synaptic plasticity, learning as well as formation of long-term memory (By similarity). Plays a role in neurite outgrowth inhibition (By similarity). Plays a proapoptotic role in response to glucose deprivation (By similarity). Promotes global cellular protein synthesis repression in response to UV irradiation independently of the stress-activated protein kinase/c-Jun N-terminal kinase (SAPK/JNK) and p38 MAPK signaling pathways (By similarity). Plays a role in the antiviral response against alphavirus infection; impairs early viral mRNA translation of the incoming genomic virus RNA, thus preventing alphavirus replication (By similarity).

**Cellular Location**

Cytoplasm {ECO:0000250|UniProtKB:Q9QZ05}.

**Tissue Location**

Widely expressed (PubMed:10504407). Expressed in lung, smooth muscle cells and macrophages (PubMed:24292273)

**GCN2 Antibody (N-term G11) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

**GCN2 Antibody (N-term G11) - Images**

Western blot analysis of GCN2 (arrow) using GCN2 Antibody (N-term G11) (Cat.#AP7130a). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected with the GCN2 gene (Lane 2) (Origene Technologies).

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.

### GCN2 Antibody (N-term G11) - Background

GCN2 (EIF2AK4) belongs to a family of kinases that phosphorylate the alpha subunit of eukaryotic translation initiation factor-2 to downregulate protein synthesis in response to varied cellular stresses.
