

MMP-3 Polyclonal Antibody
Catalog # AP72648**Specification****MMP-3 Polyclonal Antibody - Product Information**

Application	WB
Primary Accession	P08254
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal

MMP-3 Polyclonal Antibody - Additional Information

Gene ID 4314

Other Names

MMP3; STMY1; Stromelysin-1; SL-1; Matrix metalloproteinase-3; MMP-3; Transin-1

Dilution

WB~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300. Immunofluorescence: 1/200 - 1/1000. ELISA: 1/10000. Not yet tested in other applications.

Format

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

Storage Conditions

-20°C

MMP-3 Polyclonal Antibody - Protein Information

Name MMP3

Synonyms STMY1

Function

Metalloproteinase with a rather broad substrate specificity that can degrade fibronectin, laminin, gelatins of type I, III, IV, and V; collagens III, IV, X, and IX, and cartilage proteoglycans. Activates different molecules including growth factors, plasminogen or other matrix metalloproteinases such as MMP9 (PubMed: <http://www.uniprot.org/citations/11029580> target="_blank">11029580, PubMed: <http://www.uniprot.org/citations/1371271> target="_blank">1371271). Once released into the extracellular matrix (ECM), the inactive pro-enzyme is activated by the plasmin cascade signaling pathway (PubMed: <http://www.uniprot.org/citations/2383557> target="_blank">2383557). Acts also intracellularly (PubMed: <http://www.uniprot.org/citations/22265821> target="_blank">22265821). For example, in dopaminergic neurons, gets activated by the serine protease HTRA2 upon stress and plays a pivotal role in DA neuronal degeneration by mediating microglial activation and alpha- synuclein/SNCA cleavage (PubMed: <http://www.uniprot.org/citations/21330369> target="_blank">21330369). In addition,

plays a role in immune response and possesses antiviral activity against various viruses such as vesicular stomatitis virus, influenza A virus (H1N1) and human herpes virus 1 (PubMed:35940311). Mechanistically, translocates from the cytoplasm into the cell nucleus upon virus infection to influence NF-kappa-B activities (PubMed:35940311).

Cellular Location

Secreted, extracellular space, extracellular matrix. Nucleus. Cytoplasm

MMP-3 Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

MMP-3 Polyclonal Antibody - Background

Can degrade fibronectin, laminin, gelatins of type I, III, IV, and V; collagens III, IV, X, and IX, and cartilage proteoglycans. Activates procollagenase.
