**GSN Antibody (C-term) - Additional Information**

**Gene ID** 2934

**Other Names**

Gelsolin, AGEL, Actin-depolymerizing factor, ADF, Brevin, GSN

**Target/Specificity**

This GSN antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 714-743 amino acids from the C-terminal region of human GSN.

**Dilution**

WB~~1:1000-1:2000  
IHC-P~~1:50~100  
FC~~1:10~50

**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

**Storage**

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

GSN Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

**GSN Antibody (C-term) - Protein Information**

**Name** GSN

**Function** Calcium-regulated, actin-modulating protein that binds to the plus (or barbed) ends of actin monomers or filaments, preventing monomer exchange (end-blocking or capping). It can promote the assembly of monomers into filaments (nucleation) as well as sever filaments already formed (PubMed:[19666512](#)). Plays a role in ciliogenesis (PubMed:[20393563](#)).

#### Cellular Location

[Isoform 2]: Cytoplasm, cytoskeleton.

#### Tissue Location

Phagocytic cells, platelets, fibroblasts, nonmuscle cells, smooth and skeletal muscle cells

**GSN Antibody (C-term) - Background**

GSN binds to the 'plus' ends of actin monomers and filaments to prevent monomer exchange. The calcium-regulated protein functions in both assembly and disassembly of actin filaments. Defects in this protein are a cause of familial amyloidosis Finnish type (FAF).
