

**ALDH1A1 Polyclonal Antibody**  
Catalog # AP73340**Specification****ALDH1A1 Polyclonal Antibody - Product Information**

Application	WB
Primary Accession	<a href="#">P00352</a>
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal

**ALDH1A1 Polyclonal Antibody - Additional Information**

Gene ID 216

**Other Names**

ALDH1A1; ALDC; ALDH1; PUMB1; Retinal dehydrogenase 1; RALDH 1; RaLDH1; ALDH-E1; ALHDII; Aldehyde dehydrogenase family 1 member A1; Aldehyde dehydrogenase, cytosolic

**Dilution**

WB~~Western Blot: 1/500 - 1/2000. IHC-p: 1:100-300 ELISA: 1/20000. Not yet tested in other applications.

**Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

**Storage Conditions**

-20°C

**ALDH1A1 Polyclonal Antibody - Protein Information**Name ALDH1A1 ([HGNC:402](#))**Function**

Cytosolic dehydrogenase that catalyzes the irreversible oxidation of a wide range of aldehydes to their corresponding carboxylic acid (PubMed: <a href="http://www.uniprot.org/citations/12941160" target="\_blank">12941160</a>, PubMed: <a href="http://www.uniprot.org/citations/15623782" target="\_blank">15623782</a>, PubMed: <a href="http://www.uniprot.org/citations/17175089" target="\_blank">17175089</a>, PubMed: <a href="http://www.uniprot.org/citations/19296407" target="\_blank">19296407</a>, PubMed: <a href="http://www.uniprot.org/citations/25450233" target="\_blank">25450233</a>, PubMed: <a href="http://www.uniprot.org/citations/26373694" target="\_blank">26373694</a>). Functions downstream of retinol dehydrogenases and catalyzes the oxidation of retinaldehyde into retinoic acid, the second step in the oxidation of retinol/vitamin A into retinoic acid (By similarity). This pathway is crucial to control the levels of retinol and retinoic acid, two important molecules which excess can be teratogenic and cytotoxic (By similarity). Also oxidizes aldehydes resulting from lipid peroxidation like (E)-4-hydroxynon-2-enal/HNE, malonaldehyde and hexanal that form protein adducts and are highly cytotoxic. By participating for instance to the clearance of (E)-4-hydroxynon-2-enal/HNE in

the lens epithelium prevents the formation of HNE-protein adducts and lens opacification (PubMed:<a href="http://www.uniprot.org/citations/12941160" target="\_blank">12941160</a>, PubMed:<a href="http://www.uniprot.org/citations/15623782" target="\_blank">15623782</a>, PubMed:<a href="http://www.uniprot.org/citations/19296407" target="\_blank">19296407</a>). Functions also downstream of fructosamine-3-kinase in the fructosamine degradation pathway by catalyzing the oxidation of 3-deoxyglucosone, the carbohydrate product of fructosamine 3-phosphate decomposition, which is itself a potent glycating agent that may react with lysine and arginine side-chains of proteins (PubMed:<a href="http://www.uniprot.org/citations/17175089" target="\_blank">17175089</a>). Has also an aminobutyraldehyde dehydrogenase activity and is probably part of an alternative pathway for the biosynthesis of GABA/4-aminobutanoate in midbrain, thereby playing a role in GABAergic synaptic transmission (By similarity).

#### Cellular Location

Cytoplasm, cytosol. Cell projection, axon {ECO:0000250|UniProtKB:P24549}

#### Tissue Location

Expressed by erythrocytes (at protein level).

### ALDH1A1 Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

### ALDH1A1 Polyclonal Antibody - Images

### **ALDH1A1 Polyclonal Antibody - Background**

Can convert/oxidize retinaldehyde to retinoic acid. Binds free retinal and cellular retinol-binding protein-bound retinal (By similarity). May have a broader specificity and oxidize other aldehydes in vivo (PubMed:19296407, PubMed:26373694, PubMed:25450233).
