

## **SDHB Polyclonal Antibody**

**Catalog # AP73633** 

## **Specification**

# **SDHB Polyclonal Antibody - Product Information**

Application WB
Primary Accession P21912

Reactivity Human, Mouse, Rat

Host Rabbit Clonality Polyclonal

# **SDHB Polyclonal Antibody - Additional Information**

**Gene ID** 6390

#### **Other Names**

SDHB; SDH; SDH1; Succinate dehydrogenase [ubiquinone] iron-sulfur subunit, mitochondrial; Iron-sulfur subunit of complex II; Ip

#### Dilution

WB~~Western Blot: 1/500 - 1/2000. IHC-p: 1/100-1/300. ELISA: 1/20000. Not yet tested in other applications.

#### **Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

#### **Storage Conditions**

-20°C

#### **SDHB Polyclonal Antibody - Protein Information**

**Name SDHB** 

Synonyms SDH, SDH1

#### **Function**

Iron-sulfur protein (IP) subunit of the succinate dehydrogenase complex (mitochondrial respiratory chain complex II), responsible for transferring electrons from succinate to ubiquinone (coenzyme Q) (PubMed:<a href="http://www.uniprot.org/citations/26925370"

target="\_blank">26925370</a>, PubMed:<a href="http://www.uniprot.org/citations/27604842" target="\_blank">27604842</a>). SDH also oxidizes malate to the non-canonical enol form of oxaloacetate, enol- oxaloacetate (By similarity). Enol-oxaloacetate, which is a potent inhibitor of the succinate dehydrogenase activity, is further isomerized into keto-oxaloacetate (By similarity).

## **Cellular Location**

Mitochondrion inner membrane; Peripheral membrane protein; Matrix side

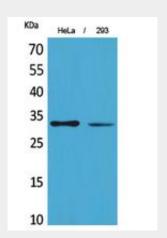

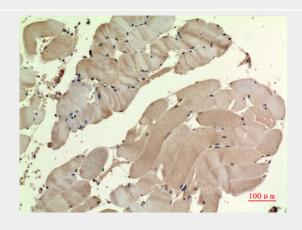

# **SDHB Polyclonal Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

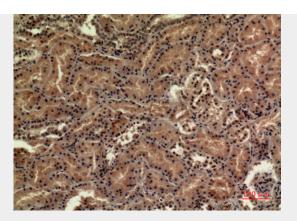

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

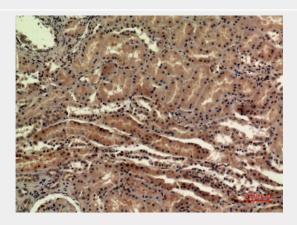

# **SDHB Polyclonal Antibody - Images**

**SDHB Polyclonal Antibody - Background** 

Iron-sulfur protein (IP) subunit of succinate dehydrogenase (SDH) that is involved in complex II of the mitochondrial electron transport chain and is responsible for transferring electrons from succinate to ubiquinone (coenzyme Q).
