

NLK-T286 Antibody (Center)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP7545c**Specification**

NLK-T286 Antibody (Center) - Product Information

Application	IF, WB, FC,E
Primary Accession	O9UBE8
Other Accession	D3ZSZ3 , O54949 , E1BMN8 , NP_057315.3
Reactivity	Human
Predicted	Bovine, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	58283
Antigen Region	275-300

NLK-T286 Antibody (Center) - Additional Information**Gene ID** 51701**Other Names**Serine/threonine-protein kinase NLK, Nemo-like kinase, Protein LAK1, NLK, LAK1
{ECO:0000312|EMBL:AAD560131}**Target/Specificity**

This NLK-T286 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 275-300 amino acids from the Central region of human NLK-T286.

DilutionIF~~1:10~50
WB~~1:1000
FC~~1:10~50**Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

NLK-T286 Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

NLK-T286 Antibody (Center) - Protein Information

Name NLK**Synonyms** LAK1 {ECO:0000312|EMBL:AAD56013.1}

Function Serine/threonine-protein kinase that regulates a number of transcription factors with key roles in cell fate determination (PubMed:[12482967](#), PubMed:[14960582](#), PubMed:[15004007](#), PubMed:[15764709](#), PubMed:[20061393](#), PubMed:[20874444](#), PubMed:[21454679](#)). Positive effector of the non-canonical Wnt signaling pathway, acting downstream of WNT5A, MAP3K7/TAK1 and HIPK2 (PubMed:[15004007](#), PubMed:[15764709](#)). Negative regulator of the canonical Wnt/beta-catenin signaling pathway (PubMed:[12482967](#)). Binds to and phosphorylates TCF7L2/TCF4 and LEF1, promoting the dissociation of the TCF7L2/LEF1/beta-catenin complex from DNA, as well as the ubiquitination and subsequent proteolysis of LEF1 (PubMed:[21454679](#)). Together these effects inhibit the transcriptional activation of canonical Wnt/beta-catenin target genes (PubMed:[12482967](#), PubMed:[21454679](#)). Negative regulator of the Notch signaling pathway (PubMed:[20118921](#)). Binds to and phosphorylates NOTCH1, thereby preventing the formation of a transcriptionally active ternary complex of NOTCH1, RBPJ/RBPSUH and MAML1 (PubMed:[20118921](#)). Negative regulator of the MYB family of transcription factors (PubMed:[15082531](#)). Phosphorylation of MYB leads to its subsequent proteolysis while phosphorylation of MYBL1 and MYBL2 inhibits their interaction with the coactivator CREBBP (PubMed:[15082531](#)). Other transcription factors may also be inhibited by direct phosphorylation of CREBBP itself (PubMed:[15082531](#)). Acts downstream of IL6 and MAP3K7/TAK1 to phosphorylate STAT3, which is in turn required for activation of NLK by MAP3K7/TAK1 (PubMed:[15004007](#), PubMed:[15764709](#)). Upon IL1B stimulus, cooperates with ATF5 to activate the transactivation activity of C/EBP subfamily members (PubMed:[25512613](#)). Phosphorylates ATF5 but also stabilizes ATF5 protein levels in a kinase-independent manner (PubMed:[25512613](#)). Acts as an inhibitor of the mTORC1 complex in response to osmotic stress by mediating phosphorylation of RPTOR, thereby preventing recruitment of the mTORC1 complex to lysosomes (PubMed:[26588989](#)).

Cellular Location

Nucleus {ECO:0000250|UniProtKB:O54949}. Cytoplasm {ECO:0000250|UniProtKB:O54949}. Note=Predominantly nuclear. A smaller fraction is cytoplasmic. {ECO:0000250|UniProtKB:O54949}

NLK-T286 Antibody (Center) - Protocols

Provided below are standard protocols that you may find useful for product applications.
