

Histone H2A.X Rabbit mAb
Catalog # AP76531**Specification**

Histone H2A.X Rabbit mAb - Product Information

Application	WB, IHC, IF
Primary Accession	P16104
Reactivity	Human
Host	Rabbit
Clonality	Monoclonal Antibody
Calculated MW	15145

Histone H2A.X Rabbit mAb - Additional Information**Gene ID** 3014**Other Names**
H2AX**Dilution**
WB~~1/500-1/1000
IHC~~1/50-1/100
IF~~1/50-1/200**Format**
Liquid**Histone H2A.X Rabbit mAb - Protein Information****Name** H2AX ([HGNC:4739](#))**Function**

Variant histone H2A which replaces conventional H2A in a subset of nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post- translational modifications of histones, also called histone code, and nucleosome remodeling. Required for checkpoint-mediated arrest of cell cycle progression in response to low doses of ionizing radiation and for efficient repair of DNA double strand breaks (DSBs) specifically when modified by C-terminal phosphorylation.

Cellular Location
Nucleus. Chromosome**Histone H2A.X Rabbit mAb - Protocols**

Provided below are standard protocols that you may find useful for product applications.
