Polycomb group (PcG) protein. Component of the PRC2 complex, which methylates 'Lys-9' (H3K9me) and 'Lys-27' (H3K27me) of histone H3, leading to transcriptional repression of the affected target gene (PubMed: [15225548](http://www.uniprot.org/citations/15225548), PubMed: [15231737](http://www.uniprot.org/citations/15231737), PubMed: [15385962](http://www.uniprot.org/citations/15385962), PubMed: [16618801](http://www.uniprot.org/citations/16618801), PubMed: [17344414](http://www.uniprot.org/citations/17344414), PubMed: [18285464](http://www.uniprot.org/citations/18285464), PubMed: [28229514](http://www.uniprot.org/citations/28229514), PubMed: [29499137](http://www.uniprot.org/citations/29499137), PubMed: [31959557](http://www.uniprot.org/citations/31959557)). The PRC2 complex may also serve as a recruiting platform for DNA methyltransferases, thereby linking two epigenetic repression systems (PubMed: [12351676](http://www.uniprot.org/citations/12351676), PubMed: [12435631](http://www.uniprot.org/citations/12435631), PubMed: [15099518](http://www.uniprot.org/citations/15099518), PubMed: [15099518](http://www.uniprot.org/citations/15099518)).

Genes repressed by the PRC2 complex include HOXC8, HOXA9, MYT1 and CDKN2A (PubMed:15231737, PubMed:16618801, PubMed:17200670, PubMed:31959557).
