

Phospho-Histone H2A.X (Ser139) Rabbit mAb

Catalog # AP76855

Specification

Phospho-Histone H2A.X (Ser139) Rabbit mAb - Product Information

Application Primary Accession Reactivity Host Clonality Calculated MW WB, IP <u>P16104</u> Human, Mouse, Rat Rabbit Monoclonal Antibody 15145

Phospho-Histone H2A.X (Ser139) Rabbit mAb - Additional Information

Gene ID 3014

Other Names H2AX

Dilution WB~~1/500-1/1000 IP~~1/20

Format Liquid

Phospho-Histone H2A.X (Ser139) Rabbit mAb - Protein Information

Name H2AX (HGNC:4739)

Function

Variant histone H2A which replaces conventional H2A in a subset of nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post- translational modifications of histones, also called histone code, and nucleosome remodeling. Required for checkpoint-mediated arrest of cell cycle progression in response to low doses of ionizing radiation and for efficient repair of DNA double strand breaks (DSBs) specifically when modified by C-terminal phosphorylation.

Cellular Location Nucleus. Chromosome

Phospho-Histone H2A.X (Ser139) Rabbit mAb - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>
