

Fibrinogen gamma Chain Rabbit mAb
Catalog # AP78021**Specification**

Fibrinogen gamma Chain Rabbit mAb - Product Information

Application	WB
Primary Accession	P02679
Reactivity	Human
Host	Rabbit
Clonality	Monoclonal Antibody
Calculated MW	51512

Fibrinogen gamma Chain Rabbit mAb - Additional Information**Gene ID** 2266**Other Names**
FGG**Dilution**
WB~~1/500-1/1000**Format**
Liquid**Fibrinogen gamma Chain Rabbit mAb - Protein Information****Name** FGG**Function**

Together with fibrinogen alpha (FGA) and fibrinogen beta (FGB), polymerizes to form an insoluble fibrin matrix. Has a major function in hemostasis as one of the primary components of blood clots. In addition, functions during the early stages of wound repair to stabilize the lesion and guide cell migration during re-epithelialization. Was originally thought to be essential for platelet aggregation, based on in vitro studies using anticoagulated blood. However, subsequent studies have shown that it is not absolutely required for thrombus formation in vivo. Enhances expression of SELP in activated platelets via an ITGB3-dependent pathway. Maternal fibrinogen is essential for successful pregnancy. Fibrin deposition is also associated with infection, where it protects against IFNG-mediated hemorrhage. May also facilitate the antibacterial immune response via both innate and T-cell mediated pathways.

Cellular Location
Secreted**Tissue Location**
Detected in blood plasma (at protein level).

Fibrinogen gamma Chain Rabbit mAb - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)
