

**AIF Antibody**  
**Rabbit mAb**  
**Catalog # AP90091**

## Specification

---

### AIF Antibody - Product Information

Application	WB, IHC, FC, ICC, IP
Primary Accession	<a href="#">O95831</a>
Reactivity	Rat
Clonality	Monoclonal
<b>Other Names</b>	
AIFM1; AIF; PDCD8; COXPD6;	
Isotype	Rabbit IgG
Host	Rabbit
Calculated MW	66901 Da

### AIF Antibody - Additional Information

Purification	Affinity-chromatography
Immunogen	A synthesized peptide derived from human AIF
Description	This gene encodes a flavoprotein essential for nuclear disassembly in apoptotic cells, and it is found in the mitochondrial intermembrane space in healthy cells. Induction of apoptosis results in the translocation of this protein to the nucleus where it affects chromosome condensation and fragmentation.
Storage Condition and Buffer	Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle.

### AIF Antibody - Protein Information

**Name** AIFM1 ([HGNC:8768](#))

**Synonyms** AIF, PDCD8

#### Function

Functions both as NADH oxidoreductase and as regulator of apoptosis (PubMed:<a href="http://www.uniprot.org/citations/17094969" target="\_blank">17094969</a>, PubMed:<a href="http://www.uniprot.org/citations/20362274" target="\_blank">20362274</a>, PubMed:<a href="http://www.uniprot.org/citations/23217327" target="\_blank">23217327</a>, PubMed:<a href="http://www.uniprot.org/citations/33168626" target="\_blank">33168626</a>). In response to apoptotic stimuli, it is released from the mitochondrion intermembrane space into the cytosol

and to the nucleus, where it functions as a proapoptotic factor in a caspase- independent pathway (PubMed:<a href="http://www.uniprot.org/citations/20362274" target="\_blank">20362274</a>). Release into the cytoplasm is mediated upon binding to poly-ADP-ribose chains (By similarity). The soluble form (AIFsol) found in the nucleus induces 'parthanatos' i.e. caspase-independent fragmentation of chromosomal DNA (PubMed:<a href="http://www.uniprot.org/citations/20362274" target="\_blank">20362274</a>). Binds to DNA in a sequence-independent manner (PubMed:<a href="http://www.uniprot.org/citations/27178839" target="\_blank">27178839</a>). Interacts with EIF3G, and thereby inhibits the EIF3 machinery and protein synthesis, and activates caspase-7 to amplify apoptosis (PubMed:<a href="http://www.uniprot.org/citations/17094969" target="\_blank">17094969</a>). Plays a critical role in caspase-independent, pyknotic cell death in hydrogen peroxide-exposed cells (PubMed:<a href="http://www.uniprot.org/citations/19418225" target="\_blank">19418225</a>). In contrast, participates in normal mitochondrial metabolism. Plays an important role in the regulation of respiratory chain biogenesis by interacting with CHCHD4 and controlling CHCHD4 mitochondrial import (PubMed:<a href="http://www.uniprot.org/citations/26004228" target="\_blank">26004228</a>).

### Cellular Location

Mitochondrion intermembrane space. Mitochondrion inner membrane. Cytoplasm. Nucleus. Cytoplasm, perinuclear region. Note=Proteolytic cleavage during or just after translocation into the mitochondrial intermembrane space (IMS) results in the formation of an inner-membrane-anchored mature form (AIFmit). During apoptosis, further proteolytic processing leads to a mature form, which is confined to the mitochondrial IMS in a soluble form (AIFsol). AIFsol is released to the cytoplasm in response to specific death signals, and translocated to the nucleus, where it induces nuclear apoptosis (PubMed:15775970). Release into the cytoplasm is mediated upon binding to poly-ADP-ribose chains (By similarity) Translocation into the nucleus is promoted by interaction with (auto- poly-ADP-ribosylated) processed form of PARP1 (PubMed:33168626) Colocalizes with EIF3G in the nucleus and perinuclear region (PubMed:17094969). {ECO:0000250|UniProtKB:Q9Z0X1, ECO:0000269|PubMed:15775970, ECO:0000269|PubMed:17094969, ECO:0000269|PubMed:33168626} [Isoform 4]: Mitochondrion. Cytoplasm, cytosol. Note=In pro-apoptotic conditions, is released from mitochondria to cytosol in a calpain/cathepsin-dependent manner.

### Tissue Location

Expressed in all tested tissues (PubMed:16644725). Detected in muscle and skin fibroblasts (at protein level) (PubMed:23217327). Expressed in osteoblasts (at protein level) (PubMed:28842795). [Isoform 4]: Expressed in all tested tissues except brain.

## AIF Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

## AIF Antibody - Images

Western blot analysis of AIF expression in K562 cell lysate.
