

**Caspase-6 Antibody**  
Rabbit mAb  
Catalog # AP90612

## Specification

---

### Caspase-6 Antibody - Product Information

|                         |                        |
|-------------------------|------------------------|
| Application             | WB, IHC, ICC, IP       |
| Primary Accession       | <a href="#">P55212</a> |
| Reactivity              | Rat                    |
| Clonality               | Monoclonal             |
| <b>Other Names</b>      |                        |
| MCH2; CASP6; Caspase-6; |                        |
| Isotype                 | Rabbit IgG             |
| Host                    | Rabbit                 |
| Calculated MW           | 33310 Da               |

### Caspase-6 Antibody - Additional Information

|                              |   |
|------------------------------|---|
| Purification                 | Affinity-chromatography   |
| Immunogen                    | A synthesized peptide derived from human Caspase-6  |
| Description                  | <b>Caspase-6 (Mch2) is one of the major executioner caspases functioning in cellular apoptotic processes. Upon apoptotic stimulation, initiator caspases such as caspase-9 are cleaved and activated. The activated upstream caspases further process downstream executioner caspases, such as caspase-3 and caspase-6, by cleaving them into large and small subunits, thereby initiating a caspase cascade leading to apoptosis. One of the major targets for caspase-6 is the membrane associated protein lamin A.</b> Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle. |
| Storage Condition and Buffer |   |

### Caspase-6 Antibody - Protein Information

**Name** CASP6 ([HGNC:1507](#))

#### Function

Cysteine protease that plays essential roles in programmed cell death, axonal degeneration, development and innate immunity (PubMed:<a href="http://www.uniprot.org/citations/19133298" target="\_blank">19133298</a>, PubMed:<a href="http://www.uniprot.org/citations/22858542" target="\_blank">22858542</a>)

target="\_blank">22858542</a>, PubMed:<a href="http://www.uniprot.org/citations/27032039" target="\_blank">27032039</a>, PubMed:<a href="http://www.uniprot.org/citations/28864531" target="\_blank">28864531</a>, PubMed:<a href="http://www.uniprot.org/citations/30420425" target="\_blank">30420425</a>, PubMed:<a href="http://www.uniprot.org/citations/32298652" target="\_blank">32298652</a>, PubMed:<a href="http://www.uniprot.org/citations/8663580" target="\_blank">8663580</a>). Acts as a non- canonical executioner caspase during apoptosis: localizes in the nucleus and cleaves the nuclear structural protein NUMA1 and lamin A/LMNA thereby inducing nuclear shrinkage and fragmentation (PubMed:<a href="http://www.uniprot.org/citations/11953316" target="\_blank">11953316</a>, PubMed:<a href="http://www.uniprot.org/citations/17401638" target="\_blank">17401638</a>, PubMed:<a href="http://www.uniprot.org/citations/8663580" target="\_blank">8663580</a>, PubMed:<a href="http://www.uniprot.org/citations/9463409" target="\_blank">9463409</a>). Lamin-A/LMNA cleavage is required for chromatin condensation and nuclear disassembly during apoptotic execution (PubMed:<a href="http://www.uniprot.org/citations/11953316" target="\_blank">11953316</a>). Acts as a regulator of liver damage by promoting hepatocyte apoptosis: in absence of phosphorylation by AMP-activated protein kinase (AMPK), catalyzes cleavage of BID, leading to cytochrome c release, thereby participating in nonalcoholic steatohepatitis (PubMed:<a href="http://www.uniprot.org/citations/32029622" target="\_blank">32029622</a>). Cleaves PARK7/DJ-1 in cells undergoing apoptosis (By similarity). Involved in intrinsic apoptosis by mediating cleavage of RIPK1 (PubMed:<a href="http://www.uniprot.org/citations/22858542" target="\_blank">22858542</a>). Furthermore, cleaves many transcription factors such as NF-kappa-B and cAMP response element-binding protein/CREBBP (PubMed:<a href="http://www.uniprot.org/citations/10559921" target="\_blank">10559921</a>, PubMed:<a href="http://www.uniprot.org/citations/14657026" target="\_blank">14657026</a>). Cleaves phospholipid scramblase proteins XKR4 and XKR9 (By similarity). In addition to apoptosis, involved in different forms of programmed cell death (PubMed:<a href="http://www.uniprot.org/citations/32298652" target="\_blank">32298652</a>). Plays an essential role in defense against viruses by acting as a central mediator of the ZBP1-mediated pyroptosis, apoptosis, and necroptosis (PANoptosis), independently of its cysteine protease activity (PubMed:<a href="http://www.uniprot.org/citations/32298652" target="\_blank">32298652</a>). PANoptosis is a unique inflammatory programmed cell death, which provides a molecular scaffold that allows the interactions and activation of machinery required for inflammasome/pyroptosis, apoptosis and necroptosis (PubMed:<a href="http://www.uniprot.org/citations/32298652" target="\_blank">32298652</a>). Mechanistically, interacts with RIPK3 and enhances the interaction between RIPK3 and ZBP1, leading to ZBP1-mediated inflammasome activation and cell death (PubMed:<a href="http://www.uniprot.org/citations/32298652" target="\_blank">32298652</a>). Plays an essential role in axon degeneration during axon pruning which is the remodeling of axons during neurogenesis but not apoptosis (By similarity). Regulates B-cell programs both during early development and after antigen stimulation (By similarity).

### Cellular Location

Cytoplasm. Nucleus

### Caspase-6 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

- [Cell Culture](#)

## Caspase-6 Antibody - Images

Western blot analysis of Caspase-6 expression in Jurkat cell lysate.
