

hnRNP K Antibody Rabbit mAb

Catalog # AP90635

## **Specification**

# hnRNP K Antibody - Product Information

WB, IHC, ICC, IP Application **Primary Accession** P61978 Reactivity Rat Clonality Monoclonal **Other Names** 65 kDa phosphoprotein; CSBP; TUNP; HNRNPK; HNRPK; DC-stretch binding protein; hnRNP-K; Isotype Rabbit IgG Host Rabbit Calculated MW 50976 Da hnRNP K Antibody - Additional Information Purification Affinity-chromatography A synthesized peptide derived from human Immunogen hnRNP K Description Facilitate pre-mRNA processing and transport of mRNA from the nucleus to cytoplasm. hnRNP K contains three unique structural motifs termed KH domains that bind poly(C) DNA and RNA sequences. Intricate architecture enables hnRNP K to facilitate mRNA biosynthesis, transcriptional regulation, and signal transduction. Research studies have shown that cytoplasmic hnRNP K expression is increased in oral squamous cell carcinoma and pancreatic cancer, and may be a potential prognostic factor. Storage Condition and Buffer Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid

## hnRNP K Antibody - Protein Information

Name HNRNPK

### Synonyms HNRPK

#### Function

One of the major pre-mRNA-binding proteins. Binds tenaciously to poly(C) sequences. Likely to

freeze / thaw cycle.

play a role in the nuclear metabolism of hnRNAs, particularly for pre-mRNAs that contain cytidine-rich sequences. Can also bind poly(C) single-stranded DNA. Plays an important role in p53/TP53 response to DNA damage, acting at the level of both transcription activation and repression. When sumoylated, acts as a transcriptional coactivator of p53/TP53, playing a role in p21/CDKN1A and 14-3-3 sigma/SFN induction (By similarity). As far as transcription repression is concerned, acts by interacting with long intergenic RNA p21 (lincRNA-p21), a non-coding RNA induced by p53/TP53. This interaction is necessary for the induction of apoptosis, but not cell cycle arrest. As part of a ribonucleoprotein complex composed at least of ZNF827, HNRNPL and the circular RNA circZNF827 that nucleates the complex on chromatin, may negatively regulate the transcription of genes involved in neuronal differentiation (PubMed:<a href="http://www.uniprot.org/citations/33174841" target=" blank">33174841</a>).

### **Cellular Location**

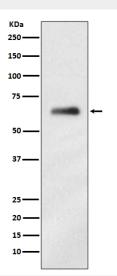

Cytoplasm. Nucleus, nucleoplasm. Cell projection, podosome. Note=Recruited to p53/TP53-responsive promoters, in the presence of functional p53/TP53 (PubMed:16360036). In case of ASFV infection, there is a shift in the localization which becomes predominantly nuclear (PubMed:18775702)

## hnRNP K Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>
