

**ATG9A Antibody**  
**Rabbit mAb**  
**Catalog # AP90707****Specification**

---

**ATG9A Antibody - Product Information**

Application	<b>WB, IHC, ICC, IP</b>
Primary Accession	<a href="#">O7Z3C6</a>
Reactivity	<b>Rat</b>
Clonality	<b>Monoclonal</b>

**Other Names**

ATG9A; APG9-like 1; Autophagy 9-like 1 protein; Autophagy-related protein 9A; MGD3208; MATG9; APG9 autophagy 9-like 1; APG9L1; Autophagy related 9A;

Isotype	<b>Rabbit IgG</b>
Host	<b>Rabbit</b>
Calculated MW	<b>94447 Da</b>

**ATG9A Antibody - Additional Information**

Purification	<b>Affinity-chromatography</b>
Immunogen	<b>A synthesized peptide derived from human ATG9A</b>
Description	<b>Involved in autophagy and cytoplasm to vacuole transport (Cvt) vesicle formation. Plays a key role in the organization of the preautophagosomal structure/phagophore assembly site (PAS), the nucleating site for formation of the sequestering vesicle.</b>
Storage Condition and Buffer	<b>Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle.</b>

**ATG9A Antibody - Protein Information**

**Name** ATG9A {ECO:0000303|PubMed:20124090, ECO:0000312|HGNC:HGNC:22408}

**Function**

Phospholipid scramblase involved in autophagy by mediating autophagosomal membrane expansion (PubMed: [22456507](http://www.uniprot.org/citations/22456507) target="\_blank">22456507</a>, PubMed: [27510922](http://www.uniprot.org/citations/27510922) target="\_blank">27510922</a>, PubMed: [29437695](http://www.uniprot.org/citations/29437695) target="\_blank">29437695</a>, PubMed: [32513819](http://www.uniprot.org/citations/32513819) target="\_blank">32513819</a>, PubMed: [32610138](http://www.uniprot.org/citations/32610138) target="\_blank">32610138</a>, PubMed: [33106659](http://www.uniprot.org/citations/33106659) target="\_blank">33106659</a>, PubMed: [33468622](http://www.uniprot.org/citations/33468622) target="\_blank">33468622</a>, PubMed: [33850023](http://www.uniprot.org/citations/33850023) target="\_blank">33850023</a>)

target="\_blank">33850023</a>). Cycles between the preautophagosomal structure/phagophore assembly site (PAS) and the cytoplasmic vesicle pool and supplies membrane for the growing autophagosome (PubMed:<a href="http://www.uniprot.org/citations/16940348" target="\_blank">16940348</a>, PubMed:<a href="http://www.uniprot.org/citations/22456507" target="\_blank">22456507</a>, PubMed:<a href="http://www.uniprot.org/citations/33106659" target="\_blank">33106659</a>). Lipid scramblase activity plays a key role in preautophagosomal structure/phagophore assembly by distributing the phospholipids that arrive through ATG2 (ATG2A or ATG2B) from the cytoplasmic to the luminal leaflet of the bilayer, thereby driving autophagosomal membrane expansion (PubMed:<a href="http://www.uniprot.org/citations/33106659" target="\_blank">33106659</a>). Also required to supply phosphatidylinositol 4- phosphate to the autophagosome initiation site by recruiting the phosphatidylinositol 4-kinase beta (PI4KB) in a process dependent on ARFIP2, but not ARFIP1 (PubMed:<a href="http://www.uniprot.org/citations/30917996" target="\_blank">30917996</a>). In addition to autophagy, also plays a role in necrotic cell death (By similarity).

### Cellular Location

Preautophagosomal structure membrane; Multi-pass membrane protein. Cytoplasmic vesicle, autophagosome membrane; Multi- pass membrane protein. Golgi apparatus, trans-Golgi network membrane; Multi-pass membrane protein. Late endosome membrane; Multi-pass membrane protein. Recycling endosome membrane; Multi-pass membrane protein. Endoplasmic reticulum membrane; Multi-pass membrane protein. Mitochondrion membrane; Multi-pass membrane protein. Note=Mainly localizes to the trans-Golgi network (TGN) and the endosomal system; cycles between them though vesicle trafficking (PubMed:27316455, PubMed:27663665). Export from the TGN to promote formation of autophagosomes is mediated by the AP-4 complex (PubMed:29180427, PubMed:30262884). Under amino acid starvation or rapamycin treatment, redistributes to preautophagosomal structure/phagophore assembly site (PAS) (PubMed:16940348). The starvation-induced redistribution depends on ULK1, ATG13, as well as SH3GLB1 (PubMed:16940348). Upon autophagy induction, a small portion transiently localizes to the autophagic membranes (PubMed:22456507) Recruited to damaged mitochondria during mitophagy in a RIMOC1- dependent manner (PubMed:34432599).

### ATG9A Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.
