PAX6

Description Transcription factor with important functions in the development of the eye.

functions in the development of the eye, nose, central nervous system and

pancreas. Required for the differentiation

of pancreatic islet alpha cells (By

similarity). Competes with PAX4 in binding to a common element in the glucagon, insulin and somatostatin promoters. Regulates specification of the ventral neuron subtypes by establishing the correct progenitor domains (By similarity).

Isoform 5a appears to function as a molecular switch that specifies target

genes.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline,

pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid

freeze / thaw cycle.
