

NM23A Antibody

Rabbit mAb Catalog # AP91847

Specification

NM23A Antibody - Product Information

ApplicationWB, IHC, FC, ICCPrimary AccessionP15531ClonalityMonoclonalOther NamesNB; AWD; NBS; GAAD; NM23; NDPKA; NDPK-A; NM23-H1; NME1;

Isotype	Rabbit IgG
Host	Rabbit
Calculated MW	17149 Da

NM23A Antibody - Additional Information

Purification Immunogen

Description

Storage Condition and Buffer

NM23A Antibody - Protein Information

Name NME1

Synonyms NDPKA, NM23

Function

Major role in the synthesis of nucleoside triphosphates other than ATP. The ATP gamma phosphate is transferred to the NDP beta phosphate via a ping-pong mechanism, using a phosphorylated active-site intermediate. Possesses nucleoside-diphosphate kinase, serine/threonine-specific protein kinase, geranyl and farnesyl pyrophosphate kinase, histidine protein kinase and 3'-5' exonuclease activities. Involved in cell proliferation, differentiation and development, signal transduction, G protein-coupled receptor endocytosis, and gene expression. Required for neural development including neural patterning and cell fate determination. During GZMA- mediated cell death, works in concert with TREX1. NME1 nicks one strand of DNA and TREX1 removes bases

Affinity-chromatography

exonuclease activities.

freeze / thaw cycle.

NM23A

A synthesized peptide derived from human

Major role in the synthesis of nucleoside

triphosphates other than ATP. Possesses

serine/threonine-specific protein kinase, geranyl and farnesyl pyrophosphate kinase, histidine protein kinase and 3'-5'

Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid

nucleoside-diphosphate kinase,

from the free 3' end to enhance DNA damage and prevent DNA end reannealing and rapid repair.

Cellular Location

Cytoplasm. Nucleus. Note=Cell-cycle dependent nuclear localization which can be induced by interaction with Epstein-barr viral proteins or by degradation of the SET complex by GzmA

Tissue Location

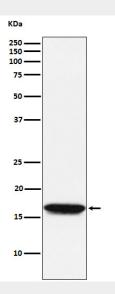

Isoform 1 is expressed in heart, brain, placenta, lung, liver, skeletal muscle, pancreas, spleen and thymus. Expressed in lung carcinoma cell lines but not in normal lung tissues. Isoform 2 is ubiquitously expressed and its expression is also related to tumor differentiation.

NM23A Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

NM23A Antibody - Images

Western blot analysis of NM23A expression in Jurkat cell lysate.
