MER34 Rabbit Polyclonal Antibody - Protein Information**Name** ERVMER34-1 ([HGNC:42970](#))**Function**

Endogenous envelope proteins originate from retroviral envelope proteins, which mediate receptor recognition and membrane fusion during early infection. Endogenous envelope proteins may have kept, lost or modified their original function during evolution.

Cellular Location

[Endogenous retroviral envelope protein HEMO]: Cell membrane; Single-pass type I membrane protein. Note=This uncleaved form present at the cell surface represents the major form (PubMed:28739914)

Tissue Location

Expressed at high level in the placenta and stem cells (at protein level) (PubMed:28739914). Also expressed in the kidney but at a lower level (PubMed:28739914). Endogenous retroviral envelope protein HEMO, secreted form: Present in the blood of pregnant women (at protein level) (PubMed:28739914)
