KR104 Rabbit Polyclonal Antibody - Protein Information

Name KRTAP10-4

Synonyms KAP10.4, KAP18-4, KRTAP10.4, KRTAP18-4,

Function
In the hair cortex, hair keratin intermediate filaments are embedded in an interfilamentous matrix, consisting of hair keratin- associated proteins (KRTAP), which are essential for the formation of a rigid and resistant hair shaft through their extensive disulfide bond cross-linking with abundant cysteine residues of hair keratins. The matrix proteins include the high-sulfur and high-glycine-tyrosine keratins.

Tissue Location
Restricted to hair root, not detected in any other tissues

KR104 Rabbit Polyclonal Antibody - Background

This is an intronless gene located in a cluster of related genes on the q arm of chromosome 21. The proteins encoded by these genes form disulfide bonds with cysteine residues in hair keratins, thereby contributing to the structure and stability of hair fibers. [provided by RefSeq, Apr 2014],
