

LRRC50 (19T11) Mouse Monoclonal antibody

LRRC50 (19T11) Mouse Monoclonal antibody Catalog # AP93911

Specification

LRRC50 (19T11) Mouse Monoclonal antibody - Product Information

Application WB, IF
Primary Accession Q8NEP3
Reactivity Human
Clonality Monoclonal
Calculated MW 80026

LRRC50 (19T11) Mouse Monoclonal antibody - Additional Information

Gene ID 123872

Other Names

Dynein axonemal assembly factor 1, Leucine-rich repeat-containing protein 50, DNAAF1, LRRC50

Storage Conditions

-20°C

LRRC50 (19T11) Mouse Monoclonal antibody - Protein Information

Name DNAAF1

Synonyms LRRC50

Function

Cilium-specific protein required for the stability of the ciliary architecture. Plays a role in cytoplasmic preassembly of dynein arms. Involved in regulation of microtubule-based cilia and actin-based brush border microvilli.

Cellular Location

Cell projection, cilium. Cytoplasm Cytoplasm, cytoskeleton, spindle pole Note=In HEK293T cells, it is diffusely cytoplasmic and concentrates at the mitotic spindle poles, while in MDCK cells, it localizes in the cilium. In vivo, this protein is probably restricted to the cilium

Tissue Location

Mainly expressed in trachea and testis.

LRRC50 (19T11) Mouse Monoclonal antibody - Protocols

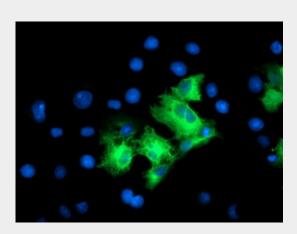

Provided below are standard protocols that you may find useful for product applications.

• Western Blot

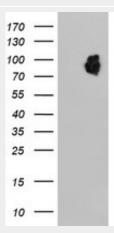

- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

LRRC50 (19T11) Mouse Monoclonal antibody - Images

Anti-LRRC50 mouse monoclonal antibody (AP93911) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY LRRC50 .

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LRRC50 (Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LRRC50. Positive lysates (100ug) and (20ug) can be purchased separately from biodragon.

LRRC50 (19T11) Mouse Monoclonal antibody - Background

The protein encoded by this gene is cilium-specific and is required for the stability of the ciliary architecture. It is involved in the regulation of microtubule-based cilia and actin-based brush border microvilli. Mutations in this gene are associated with primary ciliary dyskinesia-13. COMPLETENESS: complete on the 3' end.
