ACTH - Protein Information

Name POMC

Function	[Corticotropin]: Stimulates the adrenal glands to release cortisol. [Melanocyte-stimulating hormone beta]: Increases the pigmentation of skin by increasing melanin production in melanocytes. [Met-enkephalin]: Endogenous opiate.
Cellular Location	Secreted {ECO:0000250 UniProtKB:P01193}. Note=Melanocyte-stimulating hormone alpha and beta-endorphin are stored in separate granules in hypothalamic POMC neurons, suggesting that secretion may be under the control of different regulatory

Tissue Location

mechanisms
{ECO:0000250|UniProtKB:P01193}
ACTH and MSH are produced by the
pituitary gland.
