

**Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin)
Recombinant Antibody
Catalog # APR10273**

Specification

Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) - Product Information

Application	FC, E, FTA
Primary Accession	P20138
Reactivity	Rat, Human, Mouse
Clonality	Monoclonal
Isotype	IgG1
Calculated MW	145 KDa

Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) - Additional Information

Target/Specificity
Siglec-3 / CD33

Endotoxin
< 0.001EU/ µg,determined by LAL method.

Conjugation
#N/A

Expression system
CHO Cell

Format
Purified monoclonal antibody supplied in 100mM Pro-Ac, 20mM Arg, pH5.0, without preservative.This antibody is purified through a protein A column.

Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) - Protein Information

Name CD33

Synonyms SIGLEC3

Function
Sialic-acid-binding immunoglobulin-like lectin (Siglec) that plays a role in mediating cell-cell interactions and in maintaining immune cells in a resting state (PubMed:10611343, PubMed:11320212, PubMed:15597323). Preferentially recognizes and binds alpha-2,3- and more avidly alpha-2,6-linked sialic acid-bearing glycans (PubMed:7718872). Upon engagement of ligands such as C1q or sialylated glycoproteins, two immunoreceptor

tyrosine-based inhibitory motifs (ITIMs) located in CD33 cytoplasmic tail are phosphorylated by Src-like kinases such as LCK (PubMed:10887109, PubMed:28325905). These phosphorylations provide docking sites for the recruitment and activation of protein-tyrosine phosphatases PTPN6/SHP-1 and PTPN11/SHP-2 (PubMed:10206955, PubMed:10556798, PubMed:10887109). In turn, these phosphatases regulate downstream pathways through dephosphorylation of signaling molecules (PubMed:10206955, PubMed:10887109). One of the repressive effect of CD33 on monocyte activation requires phosphoinositide 3-kinase/PI3K (PubMed:15597323).

Cellular Location

[Isoform CD33M]: Cell membrane; Single-pass type I membrane protein

Tissue Location

Monocytic/myeloid lineage cells. In the brain, CD33 is mainly expressed on microglial cells

Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) - Images

Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) on SDS-PAGE under reducing

(R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 90%

The purity of Anti-Siglec-3 / CD33 Reference Antibody (Gemtuzumab ozogamicin) is more than 95% ,determined by SEC-HPLC.
