Human Rabbit Polyclonal

IgG

85 kDa KDa

IKK alpha antibody can be used for

detection of IKK alpha by Western blot 0.5 µg/mL. A 85 kDa band should be detected.

Antibody can also be used for

immunocytochemistry starting at 10

 $\mu g/mL$ . For immunofluorescence start at 20

μg/mL.

#### **IKK alpha Antibody - Additional Information**

Gene ID 1147

**Other Names** 

IKK alpha Antibody: IKK1, IKKA, IKBKA, TCF16, NFKBIKA, IKK-alpha, Inhibitor of nuclear factor kappa-B kinase subunit alpha, Conserved helix-loop-helix ubiquitous kinase, I-kappa-B kinase alpha, conserved helix-loop-helix ubiquitous kinase

**Target/Specificity** 

CHUK; This polyclonal antibody has no cross response to IKKb or IKKy.

#### **Reconstitution & Storage**

IKK alpha antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

#### **Precautions**

IKK alpha Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

#### **IKK alpha Antibody - Protein Information**

**Name CHUK** 

Synonyms IKKA, TCF16

#### **Function**

Serine kinase that plays an essential role in the NF-kappa-B signaling pathway which is activated

Tel: 858.875.1900 Fax: 858.875.1999

by multiple stimuli such as inflammatory cytokines, bacterial or viral products, DNA damages or other cellular stresses (PubMed: <a href="http://www.uniprot.org/citations/18626576" target=" blank">18626576</a>, PubMed:<a href="http://www.uniprot.org/citations/9244310" target=" blank">9244310</a>, PubMed:<a href="http://www.uniprot.org/citations/9252186" target=" blank">9252186</a>, PubMed:<a href="http://www.uniprot.org/citations/9346484" target=" blank">9346484</a>). Acts as a part of the canonical IKK complex in the conventional pathway of NF-kappa-B activation and phosphorylates inhibitors of NF-kappa-B on serine residues (PubMed:<a href="http://www.uniprot.org/citations/18626576" target=" blank">18626576</a>, PubMed:<a href="http://www.uniprot.org/citations/35952808" target=" blank">35952808</a>, PubMed:<a href="http://www.uniprot.org/citations/9244310" target="\_blank">9244310</a>, PubMed:<a href="http://www.uniprot.org/citations/9252186" target="\_blank">9252186</a>, PubMed:<a href="http://www.uniprot.org/citations/9346484" target="blank">9346484</a>). These modifications allow polyubiquitination of the inhibitors and subsequent degradation by the proteasome (PubMed:<a href="http://www.uniprot.org/citations/18626576" target=" blank">18626576</a>, PubMed:<a href="http://www.uniprot.org/citations/9244310" target="blank">9244310</a>, PubMed:<a href="http://www.uniprot.org/citations/9252186" target="blank">9252186</a>, PubMed:<a href="http://www.uniprot.org/citations/9346484" target=" blank">9346484</a>). In turn, free NF-kappa-B is translocated into the nucleus and activates the transcription of hundreds of genes involved in immune response, growth control, or protection against apoptosis (PubMed: <a href="http://www.uniprot.org/citations/18626576" target=" blank">18626576</a>, PubMed:<a href="http://www.uniprot.org/citations/9244310" target="blank">9244310</a>, PubMed:<a href="http://www.uniprot.org/citations/9252186" target="blank">9252186</a>, PubMed:<a href="http://www.uniprot.org/citations/9346484" target="blank">9346484</a>). Negatively regulates the pathway by phosphorylating the scaffold protein TAXBP1 and thus promoting the assembly of the A20/TNFAIP3 ubiquitin-editing complex (composed of A20/TNFAIP3, TAX1BP1, and the E3 ligases ITCH and RNF11) (PubMed: <a href="http://www.uniprot.org/citations/21765415" target=" blank">21765415</a>). Therefore, CHUK plays a key role in the negative feedback of NF-kappa-B canonical signaling to limit inflammatory gene activation. As part of the non-canonical pathway of NF-kappa-B activation, the MAP3K14-activated CHUK/IKKA homodimer phosphorylates NFKB2/p100 associated with RelB, inducing its proteolytic processing to NFKB2/p52 and the formation of NF-kappa-B RelB-p52 complexes (PubMed:<a href="http://www.uniprot.org/citations/20501937" target=" blank">20501937</a>). In turn, these complexes regulate genes encoding molecules involved in B-cell survival and lymphoid organogenesis. Participates also in the negative feedback of the non-canonical NF- kappa-B signaling pathway by phosphorylating and destabilizing MAP3K14/NIK. Within the nucleus, phosphorylates CREBBP and consequently increases both its transcriptional and histone acetyltransferase activities (PubMed:<a href="http://www.uniprot.org/citations/17434128" target=" blank">17434128</a>). Modulates chromatin accessibility at NF- kappa-B-responsive promoters by phosphorylating histones H3 at 'Ser-10' that are subsequently acetylated at 'Lys-14' by CREBBP (PubMed:<a href="http://www.uniprot.org/citations/12789342" target=" blank">12789342</a>). Additionally, phosphorylates the CREBBP-interacting protein NCOA3. Also phosphorylates FOXO3 and may regulate this pro- apoptotic transcription factor (PubMed: <a href="http://www.uniprot.org/citations/15084260" target=" blank">15084260</a>). Phosphorylates RIPK1 at 'Ser-25' which represses its kinase activity and consequently prevents TNF-mediated RIPK1-dependent cell death (By similarity). Phosphorylates AMBRA1 following mitophagy induction, promoting AMBRA1 interaction with ATG8 family proteins and its mitophagic activity (PubMed: <a href="http://www.uniprot.org/citations/30217973" target=" blank">30217973</a>).

#### **Cellular Location**

Cytoplasm. Nucleus Note=Shuttles between the cytoplasm and the nucleus

**Tissue Location** Widely expressed.

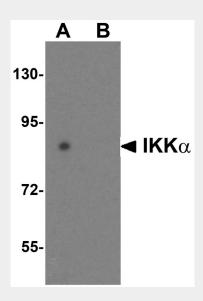

# **IKK alpha Antibody - Protocols**

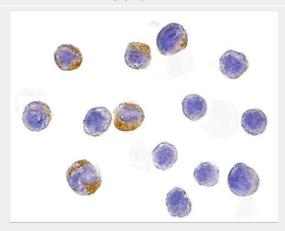

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

### **IKK alpha Antibody - Images**

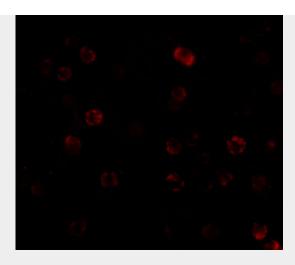

Western blot analysis of IKK alpha in HeLa cell lysate with IKK alpha antibody at 1  $\mu$ g/mL in (A) the absence and (B) the presence of blocking peptide.

Immunocytochemistry of IKK alpha in HeLa cells with IKK alpha antibody at 10 μg/mL.

Immunofluorescence of IKKa in HeLa cells with IKKa antibody at 2 μg/mL.

### IKK alpha Antibody - Background

IKK alpha Antibody: Nuclear factor kappa B (NF-κB) is a ubiquitous transcription factor and an essential mediator of gene expression during activation of immune and inflammatory responses. NF-κB mediates the expression of a great variety of genes in response to extracellular stimuli including IL-1, TNF $\alpha$  and bacteria product LPS. NF-κB is associated with IκB proteins in the cell cytoplasm, which inhibit NF-κB activity. The long-sought IκB kinase (IKK), which phosphorylates IκB, and mediates IκB degradation and NF-κB activation, was recently identified by several laboratories. IKK is a serine protein kinase, and the IKK complex contains alpha and beta subunits (IKK $\alpha$  and IKK $\beta$ ). IKK $\alpha$  and IKK $\beta$  interact with each other and both are essential for the NF-κB activation. IKK $\alpha$  specifically phosphorylates IκB-alpha. IKK $\alpha$  is expressed in a variety of human tissues.
