

**TLR6 Antibody**  
Catalog # ASC10374**Specification**

---

**TLR6 Antibody - Product Information**

|                   |   |
|-------------------|---|
| Application       | IF  |
| Primary Accession | <a href="#">O9Y2C9</a>                            |
| Other Accession   | <a href="#">NP_006059</a> , <a href="#">10333</a> |
| Reactivity        | Human, Mouse                                      |
| Host              | Rabbit  |
| Clonality         | Polyclonal  |
| Isotype           | IgG   |
| Calculated MW     | Predicted: 88 kDa                                 |

|                   |   |
|-------------------|---|
| Application Notes | <b>Observed: 100 kDa KDa</b><br>TLR6 antibody can be used for detection of TLR6 by Western blot at 1 µg/mL. Antibody can also be used for immunocytochemistry starting at 10 µg/mL. |
|-------------------|---|

**TLR6 Antibody - Additional Information**

|  |       |
|--|-------|
| Gene ID  | 10333 |
| <b>Other Names</b>   |       |
| TLR6 Antibody: CD286, Toll-like receptor 6, toll-like receptor 6 |       |

**Target/Specificity**

TLR6 antibody was raised against a peptide corresponding to 15 amino acids near the amino terminus of human TLR6. <br><br>The immunogen is located within amino acids 160 - 210 of TLR6.

**Reconstitution & Storage**

TLR6 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

TLR6 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**TLR6 Antibody - Protein Information**

**Name** TLR6

**Function**

Participates in the innate immune response to Gram-positive bacteria and fungi. Specifically recognizes diacylated and, to a lesser extent, triacylated lipopeptides (PubMed:<a href="http://www.uniprot.org/citations/20037584" target="\_blank">20037584</a>). In response to diacylated lipopeptides, forms the activation cluster TLR2:TLR6:CD14:CD36, this cluster triggers

signaling from the cell surface and subsequently is targeted to the Golgi in a lipid-raft dependent pathway (PubMed:<a href="http://www.uniprot.org/citations/16880211" target="\_blank">16880211</a>). Acts via MYD88 and TRAF6, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response. Recognizes mycoplasma macrophage-activating lipopeptide-2kD (MALP-2), soluble tuberculosis factor (STF), phenol-soluble modulin (PSM) and B.burgdorferi outer surface protein A lipoprotein (OspA-L) cooperatively with TLR2 (PubMed:<a href="http://www.uniprot.org/citations/11441107" target="\_blank">11441107</a>). In complex with TLR4, promotes sterile inflammation in monocytes/macrophages in response to oxidized low-density lipoprotein (oxLDL) or amyloid-beta 42. In this context, the initial signal is provided by oxLDL- or amyloid-beta 42- binding to CD36. This event induces the formation of a heterodimer of TLR4 and TLR6, which is rapidly internalized and triggers inflammatory response, leading to the NF-kappa-B-dependent production of CXCL1, CXCL2 and CCL9 cytokines, via MYD88 signaling pathway, and CCL5 cytokine, via TICAM1 signaling pathway, as well as IL1B secretion (PubMed:<a href="http://www.uniprot.org/citations/11441107" target="\_blank">11441107</a>, PubMed:<a href="http://www.uniprot.org/citations/20037584" target="\_blank">20037584</a>).

### Cellular Location

Cell membrane; Single-pass type I membrane protein. Cytoplasmic vesicle, phagosome membrane {ECO:0000250|UniProtKB:Q9EPW9}; Single-pass type I membrane protein. Membrane raft. Golgi apparatus. Note=Upon complex formation with CD36 and TLR4, internalized through dynamin-dependent endocytosis. Does not reside in lipid rafts before stimulation but accumulates increasingly in the raft upon the presence of the microbial ligand. In response to diacylated lipoproteins, TLR2:TLR6 heterodimers are recruited in lipid rafts, this recruitment determine the intracellular targeting to the Golgi apparatus (PubMed:16880211).

### Tissue Location

Detected in monocytes, CD11c+ immature dendritic cells, plasmacytoid pre-dendritic cells and dermal microvessel endothelial cells

### TLR6 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### TLR6 Antibody - Images

Immunofluorescence of APP in mouse brain tissue with APP Antibody at 20 µg/mL.

### **TLR6 Antibody - Background**

TLR6 Antibody: Toll-like receptors (TLRs) are evolutionarily conserved pattern-recognition molecules resembling the toll proteins that mediate antimicrobial responses in *Drosophila*. These proteins recognize different microbial products during infection and serve as an important link between the innate and adaptive immune responses. The TLRs act through adaptor molecules such as MyD88 and TIRAP to activate various kinases and transcription factors so the organism can respond to potential infection. TLR6 was first identified as a close homolog of TLR1, sharing 69% sequence identity. Like TLR1, TLR6 can form heterodimers with TLR2, and these TLR6:TLR2 dimers coordinate macrophage activation by Gram-positive bacteria and the yeast cell wall particle zymosan. Activation of these complexes not only initiates pro-inflammatory cascades, but also can lead to apoptotic responses.
