

**BAP31 Antibody**  
**Catalog # ASC10381****Specification**

---

**BAP31 Antibody - Product Information**

Application	WB, IHC
Primary Accession	<a href="#">P51572</a>
Other Accession	<a href="#">NP_005736</a> , <a href="#">32171186</a>
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	BAP31 antibody can be used for the detection of BAP31 by Western blot at 0.5 - 2 µg/mL. Antibody can also be used for immunohistochemistry starting at 2 µg/mL.

**BAP31 Antibody - Additional Information**Gene ID **10134****Other Names**

BAP31 Antibody: CDM, DDCH, BAP31, 6C6-AG, DXS1357E, B-cell receptor-associated protein 31, 6C6-AG tumor-associated antigen, BCR-associated protein 31, B-cell receptor-associated protein 31

**Target/Specificity**

BCAP31;

**Reconstitution & Storage**

BAP31 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

BAP31 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**BAP31 Antibody - Protein Information****Name** BCAP31 ([HGNC:16695](#))**Function**

Functions as a chaperone protein (PubMed: [18287538](http://www.uniprot.org/citations/18287538), PubMed: [9396746](http://www.uniprot.org/citations/9396746)). Is one of the most abundant endoplasmic reticulum (ER) proteins (PubMed: [18287538](http://www.uniprot.org/citations/18287538), PubMed: [9396746](http://www.uniprot.org/citations/9396746)). Plays a role in the export of secreted proteins in the ER, the recognition of abnormally folded

protein and their targeting to the ER associated-degradation (ERAD) (PubMed:<a href="http://www.uniprot.org/citations/18287538" target="\_blank">18287538</a>, PubMed:<a href="http://www.uniprot.org/citations/9396746" target="\_blank">9396746</a>). Also serves as a cargo receptor for the export of transmembrane proteins (By similarity). Plays a role in the assembly of the mitochondrial membrane respiratory chain NADH dehydrogenase (Complex I) by stimulating the translocation of NDUFS4 and NDUFB11 from the cytosol to the mitochondria via interaction with TOMM40 (PubMed:<a href="http://www.uniprot.org/citations/31206022" target="\_blank">31206022</a>). In response to ER stress, delocalizes from the ER-mitochondria contact sites and binds BCL2 (PubMed:<a href="http://www.uniprot.org/citations/31206022" target="\_blank">31206022</a>). May be involved in CASP8-mediated apoptosis (PubMed:<a href="http://www.uniprot.org/citations/10958671" target="\_blank">10958671</a>).

### Cellular Location

Endoplasmic reticulum membrane; Multi-pass membrane protein Endoplasmic reticulum-Golgi intermediate compartment membrane; Multi-pass membrane protein. Note=May shuttle between the ER and the intermediate compartment/cis-Golgi complex (PubMed:9396746). Associates with the mitochondria-associated endoplasmic reticulum membrane via interaction with TOMM40 (PubMed:31206022)

### Tissue Location

Ubiquitous. Highly expressed in neurons and discrete endocrine cells.

### BAP31 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

### BAP31 Antibody - Images

Western blot analysis of BAP31 in Ramos cell lysate with BAP31 antibody at (A) 0.5, (B) 1 and (C) 2 µg/mL.

Immunohistochemistry of BAP31 in rat lung tissue with BAP31 antibody at 2 µg/mL.

### **BAP31 Antibody - Background**

**BAP31 Antibody:** Bap31 and the related protein Bap29 are endoplasmic reticulum (ER) and ER-vesicle membrane proteins and members of the B-cell receptor-associated protein family. These two proteins are highly homologous and can form homo- and heterodimers. Bap31 is thought to be involved in the intracellular trafficking of several molecules such as MHC Class I molecules and CD11b/CD18. It may also play a role in the initiation of ER stress-induced apoptosis through its association with caspase-8 via a death effector domain in its cytoplasmic tail, possibly through the promotion of membrane fragmentation and the release of cytochrome c from mitochondria. Bap31 itself contains two caspase cleavage sites and is cleaved during apoptosis. The p20 fragment of Bap31, when expressed ectopically, is also a potent inducer cell death.
