

ATF6 Antibody
Catalog # ASC10390**Specification****ATF6 Antibody - Product Information**

Application	WB, ICC
Primary Accession	P18850
Other Accession	NP_031374 , 56786157
Reactivity	Human, Mouse
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	ATF6 antibody can be used for the detection of ATF6 by Western blot at 0.5 - 1 µg/mL. Antibody can also be used for immunocytochemistry starting at 10 µg/mL.

ATF6 Antibody - Additional Information

Gene ID 22926

Other Names

ATF6 Antibody: ATF6A, Cyclic AMP-dependent transcription factor ATF-6 alpha, Activating transcription factor 6 alpha, cAMP-dependent transcription factor ATF-6 alpha, activating transcription factor 6

Target/Specificity

ATF6;

Reconstitution & Storage

ATF6 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

ATF6 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

ATF6 Antibody - Protein Information

Name ATF6

Function

[Cyclic AMP-dependent transcription factor ATF-6 alpha]: Precursor of the transcription factor form (Processed cyclic AMP- dependent transcription factor ATF-6 alpha), which is embedded in the endoplasmic reticulum membrane (PubMed: [10564271](http://www.uniprot.org/citations/10564271), PubMed: [11158310](http://www.uniprot.org/citations/11158310), PubMed: [11779464](http://www.uniprot.org/citations/11779464)). Endoplasmic reticulum stress promotes processing of this form,

releasing the transcription factor form that translocates into the nucleus, where it activates transcription of genes involved in the unfolded protein response (UPR) (PubMed:10564271, PubMed:11158310, PubMed:11779464).

Cellular Location

Endoplasmic reticulum membrane; Single-pass type II membrane protein. Golgi apparatus membrane; Single-pass type II membrane protein. Note=Translocates from the endoplasmic reticulum to the Golgi, where it is processed.

Tissue Location

Ubiquitous..

ATF6 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

ATF6 Antibody - Images

Western blot analysis of ATF6 in MCF7 cell lysate with ATF6 antibody at (A) 1 and (B) 2 μ g/mL.

Immunocytochemistry of ATF6 in A20 with ATF6 antibody at 10 µg/mL.

ATF6 Antibody - Background

ATF6 Antibody: Disruptions of protein folding and maturation in the endoplasmic reticulum (ER) result in the activation of the unfolded protein response (UPR), an integrated cellular signaling pathway that transmits information from the ER lumen to the cytoplasm and nucleus. Activating transcription factor 6 (ATF6) as well as the ER-transmembrane protein kinases IRE1p and PERK are the major transducers of the UPR. ATF6 is an ER transmembrane protein that is normally bound to the ER chaperone GRP78, but upon ER stress is released from GRP78 and proteolytically cleaved to yield a cytosolic fragment which then migrates to the nucleus, and together with the transcription factor XBP-1, activates transcription of UPR-responsive genes. ATF6 has two isoforms (ATF6 α and ATF6 β); only ATF6 α is recognized by this antibody.
