

**RIG-1 Antibody**  
Catalog # ASC10467**Specification****RIG-1 Antibody - Product Information**

Application	<b>WB, IHC</b>
Primary Accession	<a href="#">O95786</a>
Other Accession	<a href="#">O95786</a> , <a href="#">81170421</a>
Reactivity	<b>Human, Mouse, Rat</b>
Host	<b>Rabbit</b>
Clonality	<b>Polyclonal</b>
Isotype	<b>IgG</b>
Application Notes	<b>RIG-1 antibody can be used for the detection of RIG-1 by Western blot at 0.5 - 2 µg/mL. Antibody can also be used for immunohistochemistry starting at 5 µg/mL.</b>

**RIG-1 Antibody - Additional Information**Gene ID **23586****Other Names**

RIG-1 Antibody: RIGI, RIG-I, RLR-1, Probable ATP-dependent RNA helicase DDX58, DEAD box protein 58, DEAD (Asp-Glu-Ala-Asp) box polypeptide 58

**Target/Specificity**

DDX58;

**Reconstitution & Storage**

RIG-1 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

RIG-1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**RIG-1 Antibody - Protein Information**Name RIGI ([HGNC:19102](#))

Synonyms DDX58

**Function**Innate immune receptor that senses cytoplasmic viral nucleic acids and activates a downstream signaling cascade leading to the production of type I interferons and pro-inflammatory cytokines (PubMed: [15208624](http://www.uniprot.org/citations/15208624), PubMed: [15708988](http://www.uniprot.org/citations/15708988), PubMed: [16125763](http://www.uniprot.org/citations/16125763)),

PubMed: <a href="http://www.uniprot.org/citations/16127453" target="\_blank">16127453</a>, PubMed: <a href="http://www.uniprot.org/citations/16153868" target="\_blank">16153868</a>, PubMed: <a href="http://www.uniprot.org/citations/17190814" target="\_blank">17190814</a>, PubMed: <a href="http://www.uniprot.org/citations/18636086" target="\_blank">18636086</a>, PubMed: <a href="http://www.uniprot.org/citations/19122199" target="\_blank">19122199</a>, PubMed: <a href="http://www.uniprot.org/citations/19211564" target="\_blank">19211564</a>, PubMed: <a href="http://www.uniprot.org/citations/24366338" target="\_blank">24366338</a>, PubMed: <a href="http://www.uniprot.org/citations/28469175" target="\_blank">28469175</a>, PubMed: <a href="http://www.uniprot.org/citations/29117565" target="\_blank">29117565</a>, PubMed: <a href="http://www.uniprot.org/citations/31006531" target="\_blank">31006531</a>, PubMed: <a href="http://www.uniprot.org/citations/34935440" target="\_blank">34935440</a>, PubMed: <a href="http://www.uniprot.org/citations/35263596" target="\_blank">35263596</a>, PubMed: <a href="http://www.uniprot.org/citations/36793726" target="\_blank">36793726</a>). Forms a ribonucleoprotein complex with viral RNAs on which it homooligomerizes to form filaments (PubMed: <a href="http://www.uniprot.org/citations/15208624" target="\_blank">15208624</a>, PubMed: <a href="http://www.uniprot.org/citations/15708988" target="\_blank">15708988</a>). The homooligomerization allows the recruitment of RNF135 an E3 ubiquitin-protein ligase that activates and amplifies the RIG-I- mediated antiviral signaling in an RNA length-dependent manner through ubiquitination-dependent and -independent mechanisms (PubMed: <a href="http://www.uniprot.org/citations/28469175" target="\_blank">28469175</a>, PubMed: <a href="http://www.uniprot.org/citations/31006531" target="\_blank">31006531</a>). Upon activation, associates with mitochondria antiviral signaling protein (MAVS/IPS1) that activates the IKK-related kinases TBK1 and IKKε which in turn phosphorylate the interferon regulatory factors IRF3 and IRF7, activating transcription of antiviral immunological genes including the IFN-α and IFN-β interferons (PubMed: <a href="http://www.uniprot.org/citations/28469175" target="\_blank">28469175</a>, PubMed: <a href="http://www.uniprot.org/citations/31006531" target="\_blank">31006531</a>). Ligands include 5'-triphosphorylated ssRNAs and dsRNAs but also short dsRNAs (<1 kb in length) (PubMed: <a href="http://www.uniprot.org/citations/15208624" target="\_blank">15208624</a>, PubMed: <a href="http://www.uniprot.org/citations/15708988" target="\_blank">15708988</a>, PubMed: <a href="http://www.uniprot.org/citations/19576794" target="\_blank">19576794</a>, PubMed: <a href="http://www.uniprot.org/citations/19609254" target="\_blank">19609254</a>, PubMed: <a href="http://www.uniprot.org/citations/21742966" target="\_blank">21742966</a>). In addition to the 5'-triphosphate moiety, blunt-end base pairing at the 5'-end of the RNA is very essential (PubMed: <a href="http://www.uniprot.org/citations/15208624" target="\_blank">15208624</a>, PubMed: <a href="http://www.uniprot.org/citations/15708988" target="\_blank">15708988</a>, PubMed: <a href="http://www.uniprot.org/citations/19576794" target="\_blank">19576794</a>, PubMed: <a href="http://www.uniprot.org/citations/19609254" target="\_blank">19609254</a>, PubMed: <a href="http://www.uniprot.org/citations/21742966" target="\_blank">21742966</a>). Overhangs at the non-triphosphorylated end of the dsRNA RNA have no major impact on its activity (PubMed: <a href="http://www.uniprot.org/citations/15208624" target="\_blank">15208624</a>, PubMed: <a href="http://www.uniprot.org/citations/15708988" target="\_blank">15708988</a>, PubMed: <a href="http://www.uniprot.org/citations/19576794" target="\_blank">19576794</a>, PubMed: <a href="http://www.uniprot.org/citations/19609254" target="\_blank">19609254</a>, PubMed: <a href="http://www.uniprot.org/citations/21742966" target="\_blank">21742966</a>). A 3' overhang at the 5'-triphosphate end decreases and any 5' overhang at the 5' triphosphate end abolishes its activity (PubMed: <a href="http://www.uniprot.org/citations/15208624" target="\_blank">15208624</a>, PubMed: <a href="http://www.uniprot.org/citations/15708988" target="\_blank">15708988</a>, PubMed: <a href="http://www.uniprot.org/citations/19576794" target="\_blank">19576794</a>, PubMed: <a href="http://www.uniprot.org/citations/19609254" target="\_blank">19609254</a>, PubMed: <a href="http://www.uniprot.org/citations/21742966" target="\_blank">21742966</a>). Detects both positive and negative strand RNA viruses including members of the families Paramyxoviridae: Human respiratory syncytial virus and measles virus (MeV), Rhabdoviridae: vesicular stomatitis virus (VSV), Orthomyxoviridae: influenza A and B virus, Flaviviridae: Japanese encephalitis virus (JEV), hepatitis C virus (HCV), dengue virus (DENV) and west Nile virus (WNV) (PubMed: <a href="http://www.uniprot.org/citations/21616437" target="\_blank">21616437</a>

target="\_blank">21616437</a>, PubMed:<a href="http://www.uniprot.org/citations/21884169" target="\_blank">21884169</a>). It also detects rotaviruses and reoviruses (PubMed:<a href="http://www.uniprot.org/citations/21616437" target="\_blank">21616437</a>, PubMed:<a href="http://www.uniprot.org/citations/21884169" target="\_blank">21884169</a>). Detects and binds to SARS-CoV-2 RNAs which is inhibited by m6A RNA modifications (Ref.70). Also involved in antiviral signaling in response to viruses containing a dsDNA genome such as Epstein-Barr virus (EBV) (PubMed:<a href="http://www.uniprot.org/citations/19631370" target="\_blank">19631370</a>). Detects dsRNA produced from non-self dsDNA by RNA polymerase III, such as Epstein-Barr virus-encoded RNAs (EBERs). May play important roles in granulocyte production and differentiation, bacterial phagocytosis and in the regulation of cell migration.

#### Cellular Location

Cytoplasm. Cell projection, ruffle membrane. Cytoplasm, cytoskeleton. Cell junction, tight junction  
Note=Colocalized with TRIM25 at cytoplasmic perinuclear bodies Associated with the actin cytoskeleton at membrane ruffles

#### Tissue Location

Present in vascular smooth cells (at protein level).

#### RIG-1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

#### RIG-1 Antibody - Images

Western blot analysis of RIG-1 in C2C12 cell lysate with RIG-1 antibody at (A) 0.5, (B) 1 and (C) 2  $\mu$ g/mL.

Immunohistochemistry of RIG-1 in human heart tissue with RIG-1 antibody at 5 µg/mL.

### **RIG-1 Antibody - Background**

**RIG-1 Antibody:** The innate immune system detects viral infection by recognizing various viral components and triggers antiviral responses. Like the toll-like receptor 3 (TLR3), the cytoplasmic helicase retinoic acid inducible gene protein 1 (RIG-1) recognizes double-stranded (ds) RNA, a molecular pattern associated with viral infection. Unlike TLR3 however, RIG-1 activates the kinases TBK1 and IKKε through the adaptor protein IPS-1. These kinases then phosphorylate the transcription factors IRF-3 and IRF-7 which are essential for the expression of type-I interferons. RIG-1 is required for the production of interferons in response to RNA viruses including paramyxoviruses, influenza virus, and Japanese encephalitis virus.
