

**AGTR1 Antibody**  
Catalog # ASC10977**Specification****AGTR1 Antibody - Product Information**

Application	WB, IHC, IF
Primary Accession	<a href="#">P30556</a>
Other Accession	<a href="#">EAW78909</a> , <a href="#">119599315</a>
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	AGTR1 antibody can be used for detection of AGTR1 by Western blot at 1 - 2 µg/mL. Antibody can also be used for immunohistochemistry starting at 2.5 µg/mL. For immunofluorescence start at 20 µg/mL.

**AGTR1 Antibody - Additional Information**

Gene ID	185
Target/Specificity	AGTR1;

**Reconstitution & Storage**

AGTR1 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

AGTR1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**AGTR1 Antibody - Protein Information**

Name AGTR1 ([HGNC:336](#))

**Function**

Receptor for angiotensin II, a vasoconstricting peptide, which acts as a key regulator of blood pressure and sodium retention by the kidney (PubMed:[15611106](http://www.uniprot.org/citations/15611106), PubMed:[1567413](http://www.uniprot.org/citations/1567413), PubMed:[25913193](http://www.uniprot.org/citations/25913193), PubMed:[26420482](http://www.uniprot.org/citations/26420482), PubMed:[30639100](http://www.uniprot.org/citations/30639100), PubMed:[32079768](http://www.uniprot.org/citations/32079768), PubMed:[8987975](http://www.uniprot.org/citations/8987975)). The activated receptor in turn couples to G-alpha proteins G(q) (GNAQ, GNA11, GNA14 or GNA15) and thus

activates phospholipase C and increases the cytosolic Ca(2+) concentrations, which in turn triggers cellular responses such as stimulation of protein kinase C (PubMed:<a href="http://www.uniprot.org/citations/15611106" target="\_blank">15611106</a>).

#### Cellular Location

Cell membrane; Multi-pass membrane protein

#### Tissue Location

Liver, lung, adrenal and adrenocortical adenomas.

### AGTR1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### AGTR1 Antibody - Images

Western blot analysis of AGTR1 in mouse kidney tissue lysate with AGTR1 antibody at (A) 1 and (B) 2 µg/mL.

Immunohistochemistry of AGTR1 in mouse kidney tissue with AGTR1 antibody at 2.5 µg/mL.

Immunofluorescence of AGTR1 in Mouse Kidney cells with AGTR1 antibody at 20 µg/mL.

### **AGTR1 Antibody - Background**

AGTR1 Antibody: Angiotensin II is a potent vasopressor hormone and a primary regulator of aldosterone secretion that acts through at least two types of receptors, AGTR1 and AGTR2. It is an important effector controlling blood pressure and volume in the cardiovascular system and plays a major role in the development of the mammalian kidney and urinary tract. AGTR1, the type 1 receptor, is thought to mediate the major cardiovascular effects of angiotensin II and may play a role in the generation of reperfusion arrhythmias following restoration of blood flow to ischemic or infarcted myocardium. AGTR1 has recently been found to regulate the differentiation of bone marrow-derived monocyte lineage progenitors from hematopoietic stem cells, indicating the diversity of the roles of AGTR1.
