**RSRC1 Antibody - Protein Information**

**Name** RSRC1

**Synonyms** SRRP53

**Function**

Has a role in alternative splicing and transcription regulation (PubMed:<a href="http://www.uniprot.org/citations/29522154" target="\_blank">29522154</a>). Involved in both constitutive and alternative pre-mRNA splicing. May have a role in the recognition of the 3' splice site during the second step of splicing.

**Cellular Location**

Nucleus. Nucleus speckle. Cytoplasm. Note=Shuttles between the nucleus and cytoplasm.

**Tissue Location**

Widely expressed. Expressed in brain, spinal cord, cerebellum.

### **RSRC1 Antibody - Background**

**RSRC1 Antibody:** The arginine/serine-rich coiled-coil 1 protein (RSRC1) was initially identified as a non-snRNP splicing factor that has a role in both the constitutive and alternative splicing of pre-mRNA molecules. In cellular nuclear extracts immunodepleted of RSRC1, the second step of pre-mRNA splicing is blocked; recombinant RSRC1 is able to restore splicing activity. RSRC1 has also been reported to be associated with schizophrenia as well as a unique marker of bone marrow-derived stem cells that also express the cdc34 marker.
