Application Notes

WB, IHC, IF
Q99708
NP\_976037, 42718017
Human, Mouse, Rat
Rabbit
Polyclonal
IgG
RBBP8 antibody can be used for detection
of RBBP8 by Western blot at 1 - 2 μg/mL.
Antibody can also be used for
immunohistochemistry starting at 5 μg/mL.

For immunofluorescence start at 20 µg/mL.

# **RBBP8 Antibody - Additional Information**

Gene ID
Target/Specificity
RBBP8:

**5932** 

### **Reconstitution & Storage**

RBBP8 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

#### **Precautions**

RBBP8 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

### **RBBP8 Antibody - Protein Information**

Name RBBP8

**Synonyms** CTIP

## **Function**

Endonuclease that cooperates with the MRE11-RAD50-NBN (MRN) complex in DNA-end resection, the first step of double-strand break (DSB) repair through the homologous recombination (HR) pathway (PubMed:<a href="http://www.uniprot.org/citations/17965729"

target="\_blank">17965729</a>, PubMed:<a href="http://www.uniprot.org/citations/19202191" target="\_blank">19202191</a>, PubMed:<a href="http://www.uniprot.org/citations/19759395" target="\_blank">19759395</a>, PubMed:<a href="http://www.uniprot.org/citations/20064462" target="\_blank">20064462</a>, PubMed:<a href="http://www.uniprot.org/citations/23273981" target="\_blank">23273981</a>, PubMed:<a href="http://www.uniprot.org/citations/26721387" target="\_blank">26721387</a>, PubMed:<a href="http://www.uniprot.org/citations/27814491"

target=" blank">27814491</a>, PubMed:<a href="http://www.uniprot.org/citations/27889449" target="blank">27889449</a>, PubMed:<a href="http://www.uniprot.org/citations/30787182" target="blank">30787182</a>). HR is restricted to S and G2 phases of the cell cycle and preferentially repairs DSBs resulting from replication fork collapse (PubMed:<a href="http://www.uniprot.org/citations/17965729" target=" blank">17965729</a>, PubMed:<a href="http://www.uniprot.org/citations/19202191" target=" blank">19202191</a>, PubMed:<a href="http://www.uniprot.org/citations/23273981" target=" blank">23273981</a>, PubMed:<a href="http://www.uniprot.org/citations/27814491" target="blank">27814491</a>, PubMed:<a href="http://www.uniprot.org/citations/27889449" target="blank">27889449</a>, PubMed:<a href="http://www.uniprot.org/citations/30787182" target="\_blank">30787182</a>). Key determinant of DSB repair pathway choice, as it commits cells to HR by preventing classical non-homologous end-joining (NHEI) (PubMed:<a href="http://www.uniprot.org/citations/19202191" target=" blank">19202191</a>). Specifically promotes the endonuclease activity of the MRN complex to clear DNA ends containing protein adducts; recruited to DSBs by NBN following phosphorylation by CDK1, and promotes the endonuclease activity of MRE11 to clear protein-DNA adducts and generate clean double-strand break ends (PubMed: <a href="http://www.uniprot.org/citations/27814491" target="\_blank">27814491</a>, PubMed:<a href="http://www.uniprot.org/citations/27889449" target="\_blank">27889449</a>, PubMed:<a href="http://www.uniprot.org/citations/30787182" target="blank">30787182</a>, PubMed:<a href="http://www.uniprot.org/citations/33836577" target="blank">33836577</a>). Functions downstream of the MRN complex and ATM, promotes ATR activation and its recruitment to DSBs in the S/G2 phase facilitating the generation of ssDNA (PubMed: <a href="http://www.uniprot.org/citations/16581787" target=" blank">16581787</a>, PubMed:<a href="http://www.uniprot.org/citations/17965729" target="\_blank">17965729</a>, PubMed:<a href="http://www.uniprot.org/citations/19759395" target="\_blank">19759395</a>, PubMed:<a href="http://www.uniprot.org/citations/20064462" target="blank">20064462</a>). Component of the BRCA1-RBBP8 complex that regulates CHEK1 activation and controls cell cycle G2/M checkpoints on DNA damage (PubMed: <a href="http://www.uniprot.org/citations/15485915" target=" blank">15485915</a>, PubMed:<a href="http://www.uniprot.org/citations/16818604" target="blank">16818604</a>). During immunoglobulin heavy chain class-switch recombination, promotes microhomology-mediated alternative end joining (A-NHEJ) and plays an essential role in chromosomal translocations (By similarity). Binds preferentially to DNA Y-junctions and to DNA substrates with blocked ends and promotes intermolecular DNA bridging (PubMed: <a href="http://www.uniprot.org/citations/30601117" target=" blank">30601117</a>).

### **Cellular Location**

Nucleus. Chromosome Note=Associates with sites of DNA damage in S/G2 phase (PubMed:10764811, PubMed:25349192). Recruited to DSBs by the MRE11- RAD50-NBN (MRN) complex following phosphorylation by CDK1, which promotes interaction with NBN (PubMed:27814491, PubMed:27889449, PubMed:33836577). Ubiquitinated RBBP8 binds to chromatin following DNA damage (PubMed:16818604).

#### **Tissue Location**

Expressed in ER-positive breast cancer lines, but tends to be down-regulated ER-negative cells (at protein level)

#### **RBBP8 Antibody - Protocols**

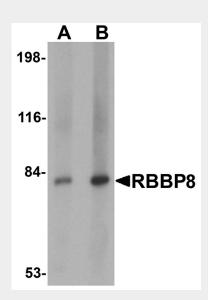

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence

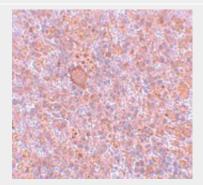

- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

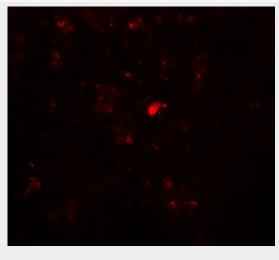

# **RBBP8 Antibody - Images**

Western blot analysis of RBBP8 in mouse spleen tissue lysate with RBBP8 antibody at (A) 1 and (B) 2  $\mu g/mL$ .

Immunohistochemistry of RBBP8 in rat spleen tissue with RBBP8 antibody at 5 μg/mL.

Immunofluorescence of RBBP8 in rat spleen tissue with RBBP8 antibody at 20  $\mu g/mL$ .

# **RBBP8 Antibody - Background**

RBBP8 Antibody: RBBP8, also known as CtBP (carboxy-terminal binding protein) interacting protein (CTIP), was characterized for its role in transcription as a cofactor for the transcriptional repressor CtBP, and also as a binding partner for other proteins including the cell cycle regulators retinoblastoma protein (Rb) and breast cancer 1 (BRCA1). It is ubiquitously expressed and localizes to the nucleus. RBBP8 is thought to modulate the functions in cell proliferation, transcriptional regulation and DNA repair. RBBP8 also plays a central role in the cell cycle checkpoint response to DNA double-stranded breaks (DSBs), with new evidence demonstrating that it controls the choice of DSB repair pathway.
