

AFP Antibody
Catalog # ASC11178**Specification**

AFP Antibody - Product Information

Application	WB, IHC, IF
Primary Accession	P02771
Other Accession	NP_001125 , 4501989
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	AFP antibody can be used for detection of AFP by Western blot at 1 µg/mL. Antibody can also be used for immunohistochemistry starting at 10 µg/mL. For immunofluorescence start at 20 µg/mL.

AFP Antibody - Additional Information

Gene ID	174
Target/Specificity	
AFP;	

Reconstitution & Storage

AFP antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

AFP Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

AFP Antibody - Protein Information

Name AFP

Synonyms HPAFP

Function

Binds copper, nickel, and fatty acids as well as, and bilirubin less well than, serum albumin. Only a small percentage (less than 2%) of the human AFP shows estrogen-binding properties.

Cellular Location

Secreted.

Tissue Location

Plasma. Synthesized by the fetal liver and yolk sac

AFP Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

AFP Antibody - Images

Western blot analysis of AFP in fetal human liver tissue lysate with AFP antibody at (A) 1 µg/mL and (B) 2 µg/mL.

Immunohistochemistry of AFP in rat liver tissue with AFP antibody at 10 µg/mL.

Immunofluorescence of AFP in rat liver tissue with AFP antibody at 20 $\mu\text{g}/\text{mL}$.

AFP Antibody - Background

AFP Antibody: Alpha-fetoprotein (AFP) is a major plasma protein produced by the yolk sac and the liver during fetal development. In adults, AFP expression is often associated with hepatoma or teratoma. However, hereditary persistence of AFP may also be found in individuals with no obvious pathology. AFP is thought to be the fetal counterpart of serum albumin, and the AFP and albumin genes are present in tandem in the same transcriptional orientation on chromosome 4. AFP is found in monomeric as well as dimeric and trimeric forms, and binds copper, nickel, fatty acids and bilirubin. AFP levels in amniotic fluid is used to measure renal loss of protein to screen for spina bifida and anencephaly.
