**RBM35A Antibody - Additional Information**

Gene ID 54845

**Target/Specificity**

ESRP1; RBM35A antibody is predicted to not cross-react with other RBM35/ESRP family members. At least five isoforms of RBM35A are known to exist; this antibody will detect all five.

**Reconstitution & Storage**

RBM35A antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

**Precautions**

RBM35A Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**RBM35A Antibody - Protein Information**

Name ESRP1

Synonyms RBM35A

**Function**

mRNA splicing factor that regulates the formation of epithelial cell-specific isoforms. Specifically regulates the expression of FGFR2-IIIb, an epithelial cell-specific isoform of FGFR2. Also regulates the splicing of CD44, CTNND1, ENAH, 3 transcripts that undergo changes in splicing during the epithelial-to-mesenchymal transition (EMT). Acts by directly binding specific sequences in mRNAs. Binds the GU-rich sequence motifs in the ISE/ISS-3, a cis-element regulatory region present in the mRNA of FGFR2 (PubMed:<a href="http://www.uniprot.org/citations/19285943" target="\_blank">19285943</a>). Regulates splicing and expression of genes involved in inner

ear development, auditory hair cell differentiation, and cell fate specification in the cochlear epithelium (By similarity).

#### Cellular Location

Nucleus.

#### Tissue Location

Epithelial cell-specific.

### **RBM35A Antibody - Background**

**RBM35A Antibody:** RBM35A, also known as ESRP1, is a mRNA splicing factor that with its related protein RBM35B (ESRP2) are coordinators of an epithelial cell-type-specific splicing program. RBM35A contains three putative RNA recognition motifs and acts by directly binding specific sequences in mRNAs. RBM35A is involved in posttranscriptional regulation of a number of genes such as FGFR2, CD44, CTNND1, and ENAH by exerting a differential effect on protein translation via 5' UTRs of mRNAs. Other recent studies have shown that RBM35A may also act as a novel tumor suppressor.
