

ATAD3A Antibody
Catalog # ASC11340**Specification****ATAD3A Antibody - Product Information**

Application	WB, ICC, IF
Primary Accession	O9NV17
Other Accession	O9NV17 , 283436220
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	ATAD3A antibody can be used for detection of ATAD3A by Western blot at 1 µg/mL. Antibody can also be used for immunocytochemistry starting at 20 µg/mL. For immunofluorescence start at 20 µg/mL.

ATAD3A Antibody - Additional Information

Gene ID 55210

Target/Specificity

ATAD3A; ATAD3A antibody is predicted to not cross-react with other ATAD protein family members. At least two isoforms are known to exist.

Reconstitution & Storage

ATAD3A antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

ATAD3A Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

ATAD3A Antibody - Protein Information

Name ATAD3A {ECO:0000303|PubMed:37832546, ECO:0000312|HGNC:HGNC:25567}

Function

Essential for mitochondrial network organization, mitochondrial metabolism and cell growth at organism and cellular level (PubMed: [17210950](http://www.uniprot.org/citations/17210950), PubMed: [20154147](http://www.uniprot.org/citations/20154147), PubMed: [22453275](http://www.uniprot.org/citations/22453275), PubMed: [31522117](http://www.uniprot.org/citations/31522117), PubMed: [37832546](http://www.uniprot.org/citations/37832546), PubMed: [39116259](http://www.uniprot.org/citations/39116259)). May play an important role in mitochondrial protein synthesis (PubMed: [22453275](http://www.uniprot.org/citations/22453275)).

May also participate in mitochondrial DNA replication (PubMed:17210950). May bind to mitochondrial DNA D-loops and contribute to nucleoid stability (PubMed:17210950). Required for enhanced channeling of cholesterol for hormone-dependent steroidogenesis (PubMed:22453275). Involved in mitochondrial-mediated antiviral innate immunity (PubMed:31522117). Required to protect mitochondria from the PERK-mediated unfolded protein response: specifically inhibits the activity of EIF2AK3/PERK at mitochondria-endoplasmic reticulum contact sites, thereby providing a safe haven for mitochondrial protein translation during endoplasmic reticulum stress (PubMed:39116259). Ability to inhibit EIF2AK3/PERK is independent of its ATPase activity (PubMed:39116259). Also involved in the mitochondrial DNA damage response by promoting signaling between damaged genomes and the mitochondrial membrane, leading to activation of the integrated stress response (ISR) (PubMed:37832546).

Cellular Location

Mitochondrion inner membrane; Single-pass membrane protein. Mitochondrion matrix, mitochondrion nucleoid Note=In the mitochondrial inner membrane, enriched in sites with the potential to form contacts with the outer membrane (PubMed:20154147, PubMed:20349121). The N-terminal domain interacts with the inner surface of the mitochondrial outer membrane and the C-terminal domain localizes in a specific matrix compartment, where it is associated with nucleoids (PubMed:18063578). Also present at mitochondria-endoplasmic reticulum contact sites; where it interacts with EIF2AK3/PERK (PubMed:39116259).

Tissue Location

Overexpressed in lung adenocarcinomas (at protein level).

ATAD3A Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Western blot analysis of ATAD3A in Daudi cell lysate with ATAD3A antibody at 1 µg/mL .

Immunocytochemistry of ATAD3A in Daudi cells with ATAD3A antibody at 20 µg/mL.

Immunofluorescence of ATAD3A in Daudi cells with ATAD3A antibody at 20 µg/mL.

ATAD3A Antibody - Background

ATAD3A Antibody: ATAD3A is a member of the AAA ATPase family, a family of proteins that catalyze ATP into ADP and are involved in several cellular functions such as cell-cycle regulation, protein proteolysis and transport. The AAA ATPase family is characterized by a highly conserved AAA motif containing Walker homology sequences and imparting ATPase activity. Mitochondrial membrane proteins ATAD3A/B contribute to the stabilization of nucleoids and may participate in the transformation pathway and the chemosensitivity of oligodendrogliomas. The gene encoding ATAD3A/B/C maps to human chromosome 1 and has been suggested to be an anti-apoptotic marker.
