

SDHD Antibody
Catalog # ASC11485**Specification****SDHD Antibody - Product Information**

Application	WB, ICC, IF
Primary Accession	O14521
Other Accession	NP_002993 , 9392
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	SDHD antibody can be used for detection of SDHD by Western blot at 1 - 2 µg/mL. Antibody can also be used for immunocytochemistry starting at 2.5 µg/mL. For immunofluorescence start at 2.5 µg/mL.

SDHD Antibody - Additional InformationGene ID **9392****Target/Specificity**

SDHD antibody was raised against a 15 amino acid synthetic peptide near the center of human SDHD. The immunogen is located within amino acids 30 - 80 of SDHD.

Reconstitution & Storage

SDHD antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

SDHD Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

SDHD Antibody - Protein Information

Name SDHD

Synonyms SDH4

Function

Membrane-anchoring subunit of succinate dehydrogenase (SDH) that is involved in complex II of the mitochondrial electron transport chain and is responsible for transferring electrons from succinate to ubiquinone (coenzyme Q) (PubMed: [10482792](http://www.uniprot.org/citations/10482792), PubMed: [9533030](http://www.uniprot.org/citations/9533030)). SDH also oxidizes malate to the non-canonical enol form of oxaloacetate, enol-oxaloacetate (By similarity). Enol-oxaloacetate, which is a potent inhibitor of the succinate dehydrogenase activity, is further

isomerized into keto-oxaloacetate (By similarity).

Cellular Location

Mitochondrion inner membrane; Multi-pass membrane protein

SDHD Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

SDHD Antibody - Images

Western blot analysis of SDHD in EL4 cell lysate with SDHD antibody at (A) 1 and (B) 2 µg/mL.

Immunocytochemistry of SDHD in EL4 cells with SDHD antibody at 2.5 µg/mL.

Immunofluorescence of SDHD in EL4 cells with SDHD antibody at 20 $\mu\text{g}/\text{mL}$.

SDHD Antibody - Background

SDHD Antibody: The mitochondrial succinate dehydrogenase complex subunit D (SDHD) is one of four proteins that make up the tricarboxylic cycle enzyme succinate dehydrogenase (SCH). Studies have shown that mutations in SDHD often leads to hereditary paragangliomas, usually benign tumors of the autonomic nervous system, suggesting that SDHD also plays a role as a tumor-suppressor gene. In one family with a nonsense mutation (R22X) in the SDHD gene, a loss of heterozygosity was found in the paragangliomas, and within these tumors the enzymatic activity of Complex II in the mitochondrial respiratory chain was completely abolished. Furthermore, high levels of angiogenic factors EPAS1 and VEGF was observed, which may stimulate tumor growth.
