

IL-11 Antibody
Catalog # ASC11966**Specification****IL-11 Antibody - Product Information**

Application	IHC
Primary Accession	P20809
Other Accession	NP_000632 , 3589
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	Predicted: 20 kDa

Application Notes	Observed: 19 kDa KDa IL-11 antibody can be used for the detection of IL-11 by Western blot at 1 - 2 µg/mL. Antibody can also be used for immunocytochemistry at 10 µg/ml.
-------------------	---

IL-11 Antibody - Additional InformationGene ID **3589****Target/Specificity**

IL-11 antibody was raised against a 16 amino acid peptide from near the amino terminus of human IL-11.

The immunogen is located within amino acids 40 - 90 of IL-11.

Reconstitution & Storage

IL-11 antibody can be stored at 4°C for three months and -20°C, stable for up to one year.

Precautions

IL-11 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

IL-11 Antibody - Protein InformationName IL11 ([HGNC:5966](#))**Function**

Cytokine that stimulates the proliferation of hematopoietic stem cells and megakaryocyte progenitor cells and induces megakaryocyte maturation resulting in increased platelet production (PubMed:2145578). Also promotes the proliferation of hepatocytes in response to liver damage. Binding to its receptor formed by IL6ST and IL11RA activates a signaling cascade that promotes cell proliferation (PubMed:12919066). Signaling leads to the activation of intracellular protein kinases and the phosphorylation of STAT3. The interaction with the membrane-bound IL11RA and IL6ST stimulates 'classic signaling', whereas the binding of IL11 and soluble IL11RA to IL6ST stimulates 'trans-signaling' (PubMed:30279168).

Cellular Location Secreted

IL-11 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

IL-11 Antibody - Images

Immunohistochemistry of PPARGC1A in rat heart tissue with PPARGC1A antibody at 5 µg/mL.

IL-11 Antibody - Background

Interleukin 11 is a pleiotropic cytokine that has multiple effects on both hematopoietic and nonhematopoietic cells. Many of the biological effects described for IL-11 overlap those for IL-6 (1). It directly stimulates the proliferation of hematopoietic stem cells and megakaryocyte progenitor cells and induces megakaryocyte maturation resulting in increased platelet production (2). IL-11 promotes the proliferation of hepatocytes in response to liver damage. IL-11 binds to its receptor formed by IL6ST and either IL11RA1 or IL11RA2 (3). Clinically it is used to prevent severe thrombocytopenia and the reduction of the need for platelet transfusion following myelo-suppressive chemotherapy (4).
