

MyD88 Antibody [2E9C2]
Catalog # ASC11989**Specification****MyD88 Antibody [2E9C2] - Product Information**

| | |
|-------------------|---|
| Application | WB, IHC |
| Primary Accession | Q99836 |
| Other Accession | AAC50954 , 1814020 |
| Reactivity | Human, Mouse |
| Host | Mouse |
| Clonality | Monoclonal |
| Isotype | IgG2b |
| Application Notes | MyD88 antibody can be used for detection of MyD88 by Western blot at 2 µg/mL. Antibody can also be used for immunohistochemistry starting at 2.5 µg/mL. For immunofluorescence start at 20 µg/mL. |

MyD88 Antibody [2E9C2] - Additional Information

| | |
|--------------------|--------|
| Gene ID | 4615 |
| Target/Specificity | MYD88; |

Reconstitution & Storage

MyD88 monoclonal antibody can be stored at -20°C, stable for one year.

Precautions

MyD88 Antibody [2E9C2] is for research use only and not for use in diagnostic or therapeutic procedures.

MyD88 Antibody [2E9C2] - Protein Information

Name MYD88 ([HGNC:7562](#))

Function

Adapter protein involved in the Toll-like receptor and IL-1 receptor signaling pathway in the innate immune response (PubMed: [15361868](http://www.uniprot.org/citations/15361868), PubMed: [18292575](http://www.uniprot.org/citations/18292575), PubMed: [33718825](http://www.uniprot.org/citations/33718825), PubMed: [37971847](http://www.uniprot.org/citations/37971847)). Acts via IRAK1, IRAK2, IRF7 and TRAF6, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response (PubMed: [15361868](http://www.uniprot.org/citations/15361868), PubMed: [19506249](http://www.uniprot.org/citations/19506249), PubMed: [24316379](http://www.uniprot.org/citations/24316379)). Increases IL-8 transcription (PubMed: [9013863](http://www.uniprot.org/citations/9013863))

target="_blank">9013863). Involved in IL-18-mediated signaling pathway. Activates IRF1 resulting in its rapid migration into the nucleus to mediate an efficient induction of IFN-beta, NOS2/INOS, and IL12A genes. Upon TLR8 activation by GU-rich single-stranded RNA (GU- rich RNA) derived from viruses such as SARS-CoV-2, SARS-CoV and HIV-1, induces IL1B release through NLRP3 inflammasome activation (PubMed:33718825). MyD88-mediated signaling in intestinal epithelial cells is crucial for maintenance of gut homeostasis and controls the expression of the antimicrobial lectin REG3G in the small intestine (By similarity).

MyD88 Antibody [2E9C2] - Images

Western blot analysis of MyD88 in EL4 whole cell lysate with MyD88 antibody at 2 µg/mL.

Immunohistochemistry of MyD88 in human heart with MyD88 antibody at 2.5 µg/mL.

MyD88 Antibody [2E9C2] - Background

MyD88 Monoclonal Antibody: The pro-inflammatory cytokine IL-1 induced cellular response requires IL-1 receptor complex including IL-1RI and IL-1RAcP. MyD88 has been identified as an adapter molecule in the IL-1 signaling pathway. MyD88 associates with and recruits IRAK to the IL-1 receptor complex in response to IL-1 treatment and dominant negative form of MyD88 attenuates IL-1R-mediated NF-κB activation. MyD88 is also employed as a regulator molecule by IL-18 receptor and human Toll receptor, which are members in the Toll/IL-1R family of receptors. Targeted disruption of the MyD88 gene results in loss of cellular responses to IL-1 and IL-18, and MyD88-deficient mice lack responses to bacterial product LPS that employs Toll-like receptors 2 and 4 (TLR2 and TLR4) as the signaling receptors. MyD88 is a general adapter protein for the Toll/IL-1R family of receptors and plays an important role in the inflammatory response induced by cytokines IL-1 and IL-18 and endotoxin. MyD88 gene is expressed in many tissues.
