

**AKT1 Western Blot Kit**  
**AKT1 Western Chemiluminescent Blotting Kit**  
**Catalog # ASR5946****Specification**

---

**AKT1 Western Blot Kit - Product Information**

Host	<b>Mouse</b>
Conjugate	<b>Unconjugated</b>
Target Species	<b>Human</b>
Reactivity	<b>Human</b>
Clonality	<b>Monoclonal</b>
Application	<b>WB, I, LCI</b>
Application Note	<b>Use Rockland Immunochemicals' Anti-AKT1 Chemiluminescent Kit for Western Blotting for detection of human AKT1 native and recombinant proteins by western blot. Expect a band approximately 56 kDa in size corresponding to AKT1 protein. This kit is useful for both western blotting and dot blotting methods. Please read the entire product insert prior to use.</b>
Preservative	<b>Wash buffers MUST NOT contain SODIUM AZIDE or other inhibitors of peroxidase activity!</b>

**AKT1 Western Blot Kit - Additional Information****Gene ID 207****Purity**

The kit is designed to detect both unphosphorylated and phosphorylated forms of the protein. Cross reactivity with AKT1 from other species has not been determined, however, the sequence of the immunogen shows 100% identity to human, mouse, and rat, therefore, cross reactivity is expected. Cross-reactivity with AKT2 and AKT3 has not been determined. This kit contains sufficient substrate for up to 5 mini blots at 7.5 x 8 cm<sup>2</sup> (1,800 cm<sup>2</sup>) and is stable for at least 1 year when stored as indicated.

**Storage Condition**

See kit insert for complete instructions.

**Precautions Note**

This product is for research use only and is not intended for therapeutic or diagnostic applications.

**AKT1 Western Blot Kit - Protein Information**

**Name** AKT1

**Synonyms** PKB, RAC

## Function

AKT1 is one of 3 closely related serine/threonine-protein kinases (AKT1, AKT2 and AKT3) called the AKT kinase, and which regulate many processes including metabolism, proliferation, cell survival, growth and angiogenesis (PubMed:<a href="http://www.uniprot.org/citations/11882383" target="\_blank">11882383</a>, PubMed:<a href="http://www.uniprot.org/citations/15526160" target="\_blank">15526160</a>, PubMed:<a href="http://www.uniprot.org/citations/15861136" target="\_blank">15861136</a>, PubMed:<a href="http://www.uniprot.org/citations/21432781" target="\_blank">21432781</a>, PubMed:<a href="http://www.uniprot.org/citations/21620960" target="\_blank">21620960</a>, PubMed:<a href="http://www.uniprot.org/citations/31204173" target="\_blank">31204173</a>). This is mediated through serine and/or threonine phosphorylation of a range of downstream substrates (PubMed:<a href="http://www.uniprot.org/citations/11882383" target="\_blank">11882383</a>, PubMed:<a href="http://www.uniprot.org/citations/15526160" target="\_blank">15526160</a>, PubMed:<a href="http://www.uniprot.org/citations/21432781" target="\_blank">21432781</a>, PubMed:<a href="http://www.uniprot.org/citations/21620960" target="\_blank">21620960</a>, PubMed:<a href="http://www.uniprot.org/citations/31204173" target="\_blank">31204173</a>). Over 100 substrate candidates have been reported so far, but for most of them, no isoform specificity has been reported (PubMed:<a href="http://www.uniprot.org/citations/11882383" target="\_blank">11882383</a>, PubMed:<a href="http://www.uniprot.org/citations/15526160" target="\_blank">15526160</a>, PubMed:<a href="http://www.uniprot.org/citations/21432781" target="\_blank">21432781</a>, PubMed:<a href="http://www.uniprot.org/citations/21620960" target="\_blank">21620960</a>). AKT is responsible of the regulation of glucose uptake by mediating insulin-induced translocation of the SLC2A4/GLUT4 glucose transporter to the cell surface (By similarity). Phosphorylation of PTPN1 at 'Ser-50' negatively modulates its phosphatase activity preventing dephosphorylation of the insulin receptor and the attenuation of insulin signaling (By similarity). Phosphorylation of TBC1D4 triggers the binding of this effector to inhibitory 14-3-3 proteins, which is required for insulin-stimulated glucose transport (PubMed:<a href="http://www.uniprot.org/citations/11994271" target="\_blank">11994271</a>). AKT regulates also the storage of glucose in the form of glycogen by phosphorylating GSK3A at 'Ser-21' and GSK3B at 'Ser-9', resulting in inhibition of its kinase activity (By similarity). Phosphorylation of GSK3 isoforms by AKT is also thought to be one mechanism by which cell proliferation is driven (By similarity). AKT regulates also cell survival via the phosphorylation of MAP3K5 (apoptosis signal-related kinase) (PubMed:<a href="http://www.uniprot.org/citations/11154276" target="\_blank">11154276</a>). Phosphorylation of 'Ser-83' decreases MAP3K5 kinase activity stimulated by oxidative stress and thereby prevents apoptosis (PubMed:<a href="http://www.uniprot.org/citations/11154276" target="\_blank">11154276</a>). AKT mediates insulin-stimulated protein synthesis by phosphorylating TSC2 at 'Ser-939' and 'Thr-1462', thereby activating the mTORC1 signaling pathway, and leading to both phosphorylation of 4E-BP1 and in activation of RPS6KB1 (PubMed:<a href="http://www.uniprot.org/citations/12150915" target="\_blank">12150915</a>, PubMed:<a href="http://www.uniprot.org/citations/12172553" target="\_blank">12172553</a>). Also regulates the mTORC1 signaling pathway by catalyzing phosphorylation of CASTOR1 and DEPDC5 (PubMed:<a href="http://www.uniprot.org/citations/31548394" target="\_blank">31548394</a>, PubMed:<a href="http://www.uniprot.org/citations/33594058" target="\_blank">33594058</a>). AKT plays a role as key modulator of the AKT-mTOR signaling pathway controlling the tempo of the process of newborn neurons integration during adult neurogenesis, including correct neuron positioning, dendritic development and synapse formation (By similarity). Part of a positive feedback loop of mTORC2 signaling by mediating phosphorylation of MAPKAP1/SIN1, promoting mTORC2 activation (By similarity). AKT is involved in the phosphorylation of members of the FOXO factors (Forkhead family of transcription factors), leading to binding of 14-3-3 proteins and cytoplasmic localization (PubMed:<a href="http://www.uniprot.org/citations/10358075" target="\_blank">10358075</a>). In particular, FOXO1 is phosphorylated at 'Thr-24', 'Ser-256' and 'Ser-319' (PubMed:<a href="http://www.uniprot.org/citations/10358075" target="\_blank">10358075</a>). FOXO3 and FOXO4 are phosphorylated on equivalent sites (PubMed:<a href="http://www.uniprot.org/citations/10358075" target="\_blank">10358075</a>). AKT has an important role in the regulation of NF-kappa-B-dependent gene transcription and positively regulates the activity of CREB1 (cyclic AMP (cAMP)-response element binding protein) (PubMed:<a href="http://www.uniprot.org/citations/10358075" target="\_blank">10358075</a>).

[9829964](http://www.uniprot.org/citations/9829964)). The phosphorylation of CREB1 induces the binding of accessory proteins that are necessary for the transcription of pro-survival genes such as BCL2 and MCL1 (PubMed:[9829964](http://www.uniprot.org/citations/9829964)). AKT phosphorylates 'Ser-454' on ATP citrate lyase (ACLY), thereby potentially regulating ACLY activity and fatty acid synthesis (By similarity). Activates the 3B isoform of cyclic nucleotide phosphodiesterase (PDE3B) via phosphorylation of 'Ser-273', resulting in reduced cyclic AMP levels and inhibition of lipolysis (By similarity). Phosphorylates PIKFYVE on 'Ser-318', which results in increased PI(3)P-5 activity (By similarity). The Rho GTPase-activating protein DLC1 is another substrate and its phosphorylation is implicated in the regulation cell proliferation and cell growth (By similarity). Signals downstream of phosphatidylinositol 3-kinase (PI(3)K) to mediate the effects of various growth factors such as platelet-derived growth factor (PDGF), epidermal growth factor (EGF), insulin and insulin-like growth factor 1 (IGF1) (PubMed:[12176338](http://www.uniprot.org/citations/12176338)), PubMed:[12964941](http://www.uniprot.org/citations/12964941)). AKT mediates the antiapoptotic effects of IGF1 (By similarity). Essential for the SPATA13-mediated regulation of cell migration and adhesion assembly and disassembly (PubMed:[19934221](http://www.uniprot.org/citations/19934221)). May be involved in the regulation of the placental development (By similarity). Phosphorylates STK4/MST1 at 'Thr-120' and 'Thr-387' leading to inhibition of its: kinase activity, nuclear translocation, autophosphorylation and ability to phosphorylate FOXO3 (PubMed:[17726016](http://www.uniprot.org/citations/17726016)). Phosphorylates STK3/MST2 at 'Thr-117' and 'Thr-384' leading to inhibition of its: cleavage, kinase activity, autophosphorylation at Thr-180, binding to RASSF1 and nuclear translocation (PubMed:[20086174](http://www.uniprot.org/citations/20086174)). Phosphorylates SRPK2 and enhances its kinase activity towards SRSF2 and ACIN1 and promotes its nuclear translocation (PubMed:[19592491](http://www.uniprot.org/citations/19592491)). Phosphorylates RAF1 at 'Ser-259' and negatively regulates its activity (PubMed:[10576742](http://www.uniprot.org/citations/10576742)). Phosphorylation of BAD stimulates its pro-apoptotic activity (PubMed:[10926925](http://www.uniprot.org/citations/10926925)). Phosphorylates KAT6A at 'Thr-369' and this phosphorylation inhibits the interaction of KAT6A with PML and negatively regulates its acetylation activity towards p53/TP53 (PubMed:[23431171](http://www.uniprot.org/citations/23431171)). Phosphorylates palladin (PALLD), modulating cytoskeletal organization and cell motility (PubMed:[20471940](http://www.uniprot.org/citations/20471940)). Phosphorylates prohibitin (PHB), playing an important role in cell metabolism and proliferation (PubMed:[18507042](http://www.uniprot.org/citations/18507042)). Phosphorylates CDKN1A, for which phosphorylation at 'Thr-145' induces its release from CDK2 and cytoplasmic relocation (PubMed:[16982699](http://www.uniprot.org/citations/16982699)). These recent findings indicate that the AKT1 isoform has a more specific role in cell motility and proliferation (PubMed:[16139227](http://www.uniprot.org/citations/16139227)). Phosphorylates CLK2 thereby controlling cell survival to ionizing radiation (PubMed:[20682768](http://www.uniprot.org/citations/20682768)). Phosphorylates PCK1 at 'Ser-90', reducing the binding affinity of PCK1 to oxaloacetate and changing PCK1 into an atypical protein kinase activity using GTP as donor (PubMed:[32322062](http://www.uniprot.org/citations/32322062)). Also acts as an activator of TMEM175 potassium channel activity in response to growth factors: forms the lysoK(GF) complex together with TMEM175 and acts by promoting TMEM175 channel activation, independently of its protein kinase activity (PubMed:[32228865](http://www.uniprot.org/citations/32228865)). Acts as a regulator of mitochondrial calcium uptake by mediating phosphorylation of MICU1 in the mitochondrial intermembrane space, impairing MICU1 maturation (PubMed:[30504268](http://www.uniprot.org/citations/30504268)). Acts as an inhibitor of tRNA methylation by mediating phosphorylation of the N-terminus of METTL1, thereby inhibiting METTL1 methyltransferase activity (PubMed:[30504268](http://www.uniprot.org/citations/30504268)).

href="http://www.uniprot.org/citations/15861136" target="\_blank">15861136</a>). In response to LPAR1 receptor pathway activation, phosphorylates Rabin8/RAB3IP which alters its activity and phosphorylates WDR44 which induces WDR44 binding to Rab11, thereby switching Rab11 vesicular function from preciliary trafficking to endocytic recycling (PubMed:<a href="http://www.uniprot.org/citations/31204173" target="\_blank">31204173</a>).

#### **Cellular Location**

Cytoplasm {ECO:0000250|UniProtKB:P31750}. Nucleus. Cell membrane. Mitochondrion intermembrane space {ECO:0000250|UniProtKB:P31750}. Note=Nucleus after activation by integrin-linked protein kinase 1 (ILK1). Nuclear translocation is enhanced by interaction with TCL1A. Phosphorylation on Tyr-176 by TNK2 results in its localization to the cell membrane where it is targeted for further phosphorylations on Thr-308 and Ser-473 leading to its activation and the activated form translocates to the nucleus Colocalizes with WDFY2 in intracellular vesicles (PubMed:16792529) Also localizes to mitochondrial intermembrane space in response to rapamycin treatment (By similarity). {ECO:0000250|UniProtKB:P31750, ECO:0000269|PubMed:16792529}

#### **Tissue Location**

Expressed in prostate cancer and levels increase from the normal to the malignant state (at protein level). Expressed in all human cell types so far analyzed. The Tyr-176 phosphorylated form shows a significant increase in expression in breast cancers during the progressive stages i.e. normal to hyperplasia (ADH), ductal carcinoma in situ (DCIS), invasive ductal carcinoma (IDC) and lymph node metastatic (LNMM) stages.

### **AKT1 Western Blot Kit - Protocols**

Provided below are standard protocols that you may find useful for product applications.

#### **AKT1 Western Blot Kit - Background**

Rockland Immunochemicals' Chemiluminescent Western Blot Kit for AKT1 combines all of the necessary reagents with a rapid proven protocol and the extremely high signal detection of our luminol chemiluminescent substrate for the detection of native and/or recombinant human AKT1 protein. AKT1 Western Blotting kit allows for the detection of endogenous protein levels of human AKT1 present in cell lysates provided by the user. As a positive control, this kit includes a MDA-MB468 whole cell lysate proven to contain AKT1. After protein separation by SDS-PAGE and transfer, the membrane is probed with Rockland's optimized Anti-AKT1 antibody. Detection of the membrane bound antibody-antigen complex is achieved by the addition of a secondary antibody conjugated to the enzyme horseradish peroxidase. The enzyme reacts with a specialized formulation of luminol, an extremely sensitive, non-radioactive substrate that emits light and allows visualization using X-ray film or other imaging methods, including highly sensitive CCD cameras and imaging systems. AKT1 Western Blotting is ideal for investigators involved in Cell Signaling, Cancer, Neuroscience and Signal Transduction research.
